

GRAPHICS PACKAGE FOR YOUR AMSTRAD AT A TRULY UNBEATABLE PRICE!!

Genius/Ilouse

COMPLETE

>>>>> SPECIAL OFFER PACK!!

- Genius Mouse is a high resolution two button mouse featuring optical counting, teflon guides, microswitches, rubber coated ball and high quality interface.
- When combined with OCP Advanced Art Studio this graphics package is quite simply the best system available. The features are unmatched...
- Create an image shrink it, expand it, move it, rotate it, copy it, colour it, etc., etc.
- Spray patterns or shades, make elastic lines stretch and manipulate shapes.
- Zoom in to add detail in fine mode.
 Full cut and paste facilities plus excellent printer support.
- Pulldown/Icon driven menus for ease of use,
 Mouse operation, plus joystick and keyboard control. • 16 pens, 8 sprays, 16 brushes - so flexible anyone can create superb graphics easily.

COMPLETE WITH MOUSE INTERFACE

 The Genius Mouse Graphics System comes complete with the special Mouse Interface to allow super smooth control.

 Attractively styled to match vour 464 or 6128 design and colour. Simply plugs into Expansion/Joystick port.

TOTAL PACKAGE INCLUDES GENIUS MOUSE. INTERFACE, OCP ADVANCED ART STUDIO PLUS FREE MOUSE MAT AND HOLDER

TAPE OR DISK FOR 464 OR 6128 (PLEASE STATE WHICH **REQUIRED) N.B. 464 NEEDS DK'TRONICS 64K RAM PACK**

MOUSE MAT AND MOUSE HOLDER (WORTH £12.99) WITH EACH PACKAGE

LC 200 COLOUR PRINTER PACKAGE

NOW YOU CAN PRINT OUT YOUR PICTURES IN FULL COLOUR!

- The Star LC200 Colour Printer not only prints in Near Letter Quality for your regular jobs but also prints out your pictures from Art Studio, etc., in genuine colour!
- LC200 is a full Centronics printer so it works with other computers (Amiga, ST, etc.).
- Made possible by Datel's unique colour printer driver now you can have a hardcopy in up to 16 colours!! • No more to buy - just plug in and print!!

PACKAGE INCLUDES... STAR LC200 COLOUR PRINTER RRP £299.00 CENTRONICS PRINTER LEAD RRP £9.99 DATEL COLOUR PRINTER DRIVER SOFTWARE RRP £19,99 NORMALLY £327.98

COMPLETE PACKAGE NOW

COLOUR PRINTER DRIVER AVAILABLE SEPARATELY ONLY £19.99 If you already have an LC10 or LC 200 Colour Printer we can supply the Driver separately.

- Simple plug in memory expansion gives instant extra memory. • Features bank switching software for easy use by the programmer
- or for use as a data storage area.
- Ideal for use with the CPM 2.2 etc.
- The software also features some extra BASIC commands.
- 64K unit expands 464 to 128K.
- 64K unit brings 464 up to CPC 6128 memory configuration making a much larger software base available. Will work straight off with many programs designed for this unit (including OCP Art Studio
- Bank switching done automatically by software (cassette 464).

ONLY £49.99 64K FOR 464

Bully insid

NOT an official **Amstrad** publication!

Serious

You can use it to program tunes right there on your CPC. But would you want to? Find out...

At last, the final part of our 'learn to draw on a computer, it's really easy, honest' feature.

It might not sound all that interesting, but this is the first 3.5inch drive you can use as an A: drive. Now that's exciting.

You've mastered last month's machine code program, so now it's time to get to work on some more.

Technical problems solved, technical things discussed, technical tips given. If it's technical, it's in here.

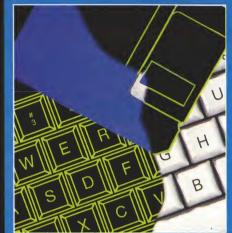

When you've written that hot piece of software, you're only going to make money if you can sell it. Find out how.

They might not appear on the tape any more, but if you take the trouble to type them in, they're still as much fun as ever.

Bully's there, but where's Jim? - page 44.

Main feature

16

Mega Bytes

Data storage – the complete story. From punch cards to CD ROM, it's all here. Everything you ever wanted to know about how to keep things safe and sound.

It's the final part of our series on getting more from your machines. This month – a tape connector for your 6128 Plus.

Frivolous

That Balrog chap gets his head round your adventuring questions, queries, and, er... quivering, quixotic, quick-fire, er...

And suddenly, it was your chance to have your game idea turned into a real game and put on our covertape.

Free software? Surely not! Ah, but yes. More free fun, in fact, than you ever dreamed possible. Check it out.

And you'll believe a Bart can fly - page 45.

Meet fluffy animals and kill them - page 48

43 Power up

What have we been getting up to this month? What's happening in the charts? Where's my blue pen?

Lovely, smashing, super, let's have a look at what you could have won... Sadly, there's no Jim Bowen, but it's fun nevertheless.

Bart vs The Space Mutants

The Simpsons, eh? Don't you just love 'em? Bart gets to grips with some nasty aliens in this re-release.

It's a compilation of four sports games. What more can we say?

So cute, it'll make you try to think of funny things to say about cute things. Or something.

51) Cheat Mode

If you have problems with your games, then this is definitely the place to come. This month, Dizzy gets the treatment.

Regulars

4 Covertape

This is where you find out how to use BooTracker, Balloon Buster and SYNTAX. So you should jolly well read these pages right now or you'll regret it.

6 Amscene

Keep yourself up to date with everything in the CPC world with our groovy news-type pages. If it's happening, it's here (probably).

31 Subscribe!

Everyone likes getting something nice in the post. So subscribe to AA and you'll get a nice silvery package every month with a magazine in it.

34 Back Issues

If you're missing an issue of AA then turn to page 34 right away. Send off for it now before they all sell out. It would be tragic not to have a complete collection.

39 Small Ads

They're reader ads. They're free. That means loads of people use them. That means there are loads of bargains to be had. That's a Good Thing.

54 Reaction

We value your opinions. We don't always agree with them or even take any notice of them. But if you've got something to say then this is the place to say it.

S Next Month

Er... this is the page where we make some educated guesses about what's going to be in next month's issue. Sometimes we're right, sometimes we're not...

CLASSIC COLLECTION

Hurrah – it's back. The new-look AA Classic Collection makes its triumphant return with three absolute smashers. Make some music, play some games. It can't fail.

BooTracker If music be the food of love.

play on; give me excess of it.
In fact if music does be the
food of love, you're going to have
the best-fed love on your street

The reason? Well we've only gone and got BooTracker for you. It's a totally ace music package that'll let you record your own tunes right there on your CPC.

this month

You've heard the new Depeche Mode album, right? Well that was recorded entirely using BooTracker and an old radio cassette in Dave Gahan's mum's garage. (That's not strictly true, is it? – Ed) Well, not as such. But they would have used

BooTracker if they hadn't been major recording artists with loads of really expensive equipment and a huge budget for expensive studios and producers and stuff.

But if you want to make music on your CPC, we've given you absolutely everything you need except talent - you have to bring your own.

SYNTAX

Last month we tried to encourage you to polish up your tactical skills with a few games of that old classic, chess.

Well enough of that elitist intellectual nonsense, it's time to get back to our primitive roots and kill loads of stuff.

There's an alien invasion going on or something but that's not important right now. All you need to know is that you've got to fly fast and shoot anything that gets in your way. None of that namby-

pamby 'let's sit
down and talk
about this like
civilised people'
nonsense. Kill,
kill, kill, and then
kill some more.
You'll feel
better for it.

BalloonBuster

Puzzle games, eh? Doncha just love 'em? This one's particularly appealing, concerning, as it does, the adventures of Buster the Clown and his balloon bursting activities. Laugh? Yes we did, thank you.

If you thought clowns were just people who dressed in baggy clothes, wore amusing make-up and performed slapstick comedy then, er... well you'd be right, actually. But Buster has another

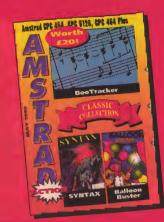

mission in his
clownish life – he
loves to burst
balloons. But he
can't do it
without your
help. Go on,
make an old
clown happy.

Tasword Problems

If you're a 464 owner and you couldn't get Tasword to load turn to page 56 for the complete solution to all your problems. We're really sorry about all the aggravation – we promise not to let it happen again. But still, eh? All's well that ends well, as they say.

Just turn the page for all the details 🖜 🖚

BooTracker

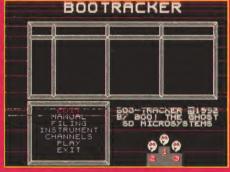

Right folks and folkesses, this month we've got a utility for everybody to use. It's called BooTracker, and it's a complete sound tracker package by a certain Simon Forrester.

BooTracker

quality soundtracks for use in your own work, by using the interrupt feature provided, write tunes with the easy-to-use track editor, and create new instruments with the extensive sound editor.

Using Boo-Tracker

The program itself is of a menus design, using the up and down arrows to pinpoint an option,

It's no good just sitting there staring at the page. Load the program and get creating.

so if you press it enough times, you'll eventually

How The System Works

sequences, which contain a riff likely to be repeated throughout the tune, though not necessarily. These sequences are then tied together and given a running order, and so a tune may be built up from simpler blocks, without re-typing repeated sections, etc.

consisting of either silences, sounds, or a items. This means that these 16 sequences can sequences may be altered, allowing various time

The actual notes sounded can be played on different instruments, of which there are 14 in total. These instruments are defined with sound and envelope waves, using the instrument editor provided.

BOOTRACKER

Programmer Simon Forrester in selfindulgent photo. Mr Forrester is 94.

already a music file on the disc as an example of what can be done. You might also find it interesting to try re-arranging the sequence

documentation and stuff is copyright of Boo The Ghost and Simon Forrester.

The Main Menu

This comprises the following main options:

There are three options on the edit menu:

The Instrument Editor

The music you write will quite obviously need instruments to play it, and so you will need to design some. Failing this, you can use the quick start file already sitting on the disc. The instrument wave system is compatible with BASIC, so for the actual nitty gritty of building manual. I'm quite sure it can explain things a whole lot better than I can!

volume envelopes for now, as the tone envelopes are only used for pitch bends.

Right. You can move over the value to

change with the cursor keys, and change that value with the following keys:

Q - Increase value | I - Next instrument A - Decrease value K - Previous instrument [- Increase noise SPACE - Test instrument

The noise (or distortion) factor can only be changed on the volume editor, as it seemed pointless to provide the option twice.

now, so use the quick start file (Funnily enough, this is called QUICK) 'till you get the gist of

It's all very straightforward, and you'll be able to work it out very quickly.

things. Basically, take the parameters out of an the instrument editor.

Using Your Tunes

CALL &9A90

Right. Once you've written your tune, you'll want to do something with it, won't you? Yes, you will. Nip along to the filing menu select COMPILE. After giving a filename, the machine will pause for a few seconds, then save out a file to disc This file will have a .MUS extension as opposed to .BOO, so there's no danger of accidentally getting it mixed up with your

your own programs by using the following few mes of BASIC:

LOAD "filename.MUS", &8000

Test Sequence

Tune

This option is the main bulk of the package itself and will be entered into in more detail later.

Sequence

The actual order of the sequences can be determined by using the up and down cursor keys to select the slot position, and the left and right cursor keys to select the sequence number.

Timing

Using the up and down cursor keys, the number of beats per second can be altered in the range

Test Sequence

Manual

Using the various keys (see quick keypress chart later) you may test instruments and devise tunes using this manual play option.

This deals with the loading and saving of tunes. a catalogue option can't be included.

The Boo files can be compiled to run from BASIC, and this will be explained in more detail later on. Incidentally, facilities are present for using Boo files from machine code.

Channels

Channels may be toggled on or off by pressing the channel number. A silent channel is signified

Amstrad 128K Microcomputer (v3) ©1985 Amstrad Consumer Electronics p BASIC 1.1 Ready memory &7fff Ready Toad "titletum.mus",&8000 Ready call &9a90 Ready Jow!

You can use this machine code call to play your tune, either in BASIC or machine code

BOOTRACKER

This will load up the tune and start it playing.

To stop it, you must issue the following

Just create an instrument for yourself by fiddling around in this menu. It's simple.

by the ghost on the particular pedestal position

Play

This option quite obviously deals with playing

The Tune Editor

This is the main option and will allow you to

W=C# E=D# T=F# Y=G# U=A# A=C S=D D=E F=F G=G H=A J=B

Cursor keys are used to move the cursor (no. really), and with CTRL depressed, the UP and DOWN keys take you to the start or end of your tune. There are several other keys that can be used in order to edit your tune with ease:

L - Lower octave

K – Use previous instrument

SPACE - Leave blank space •

Read this right now - it's important.

Just pop the tape into your machine, making sure it's rewound to the start of Side 1, and then press CTRL + ENTER (or type RUN""), then press any key and the tape will start loading.

Within a few moments you get a menu screen. Choose the program you want using the Spacebar, then hit the RETURN key.

 Note that none of the programs need be loaded directly from the main menu. They can all be run from BASIC. The menu lists them, but you must guit back to BASIC to run them. (Use the RUN"(filename)" command.)

If you have a disk drive either built into your. machine or plugged in, you will first have to type Itape to switch the computer to tape loading. You get the I character by pressing SHIFT+@. Then just proceed as normal.

It doesn't work?

We go to great lengths to make sure that our covertapes work properly. However, if you still have difficulty, try this:

 Loading at several different volume levels (if you're using an external tape recorder) . Cleaning the tape heads. This can be done with any commercially available cleaning kit Adjusting the cassette recorder's head alignment The alignment screw is located just to the left of the tape head, and is usually accessible through a small hole. Turn it a fraction at a time with a jeweller's screwdriver. When the crispest sound is heard, the alignment is spot on. Tapping the cassette gently against a table edge - the spools may be sticking or jammed.

If you still can't get the tape to load then send the tane, along with a brief description of the problem and a sae to:

AA92 Covertape Returns, Ablex Audio Video Ltd, Harcourt, Halesford 14. **Telford, Shropshire** TF7 4QD

Want it on disc?

The covertape contains its own tape-disc copying program. To transfer the programs to tape, simply follow the instructions on the tape.

 464 owners with external 3-inch drives will. have no problems, but 6128 owners will need a cassette player with a REM socket. Stopping and starting the tape manually is difficult.

• 6128 Plus owners who've had their machines modified to load from tane can transfer the programs to disk, but must rewind to the start of the tape again before the transfer starts.

You can also order a disk version of the covertape from our duplicators, Ablex. Snip off the coupon on the corner of this page and send it with a cheque/PO for £2.00 to:

AA92Disk Offer, Ablex **Audio Video, Harcourt,** Halesford 14, Telford, **Shropshire** TF7 4QD

And if you're a 464 owner who had problems with Tasword last month, turn to page 56 where you'll find the complete solution to all your problems. We're really, really sorry.

Balloon Buster

honour that AA presents a concept in computer entertainment - a pop-'emup! What, we hear you cry. the hell is that, then? Think of it from Buster the

own business one day, when suddenly he gets tell which direction the car was travelling.

Büster'. Look, he's waving at you. Hurrah.

Suddenly, the sound of the car wheels vanished. They were no longer on the road. Grass, maybe? But the next thing Buster knew, the boot was open, and he was roughly dragged out and upright in a circus field.

"Where am I?" asked the terrified clown. "Shaddapp and get bursting," replied the rough voice.

"Bursting?" asked Buster, until he looked up. Above him was a roof full of balloons, ripe for destruction. "How? Why?" he asked in a

"Use your imagination. And if you want to live, don't ask any more questions." The villainous crook had cut him short.

So Buster got to work. He found a ball in his pocket, and began to work out what to do. After a few minutes he realized that he had to hit the balloons in a coloured sequence, that ran red, green, yellow, and then blue. He managed to move left and right using the 'Z' and 'X' keys, and increase the power of his throw using the 'ENTER' key. He could also turn around by pressing 'SPACE'.

Buster's a simple soul and he likes nothing more than bursting a few balloons.

...well, obviously he's quite fond of opera too, and French cinema, and literature

After a twenty-year war has ravaged planet Earth, the rebel forces have retreated to the planet Syntax.

For twenty years he rebels have planned to apture the Earth. Now, at ast, they have the ultimate

controlled sub-atomic disintegrator which Syntax: can provide

the Flight Commander of the Air Force's top squadron of impulse-drive fighters is calling for volunteers for the ultimate suicide mission.

In a weak moment you volunteer and wake up to find yourself in the briefing room.

calculate that these crystals, dotted around the plant's surface, can be used to force radiodeactivity into the planet's molten core and that this will be enough to bring their plans to an

ventilation shafts - so there is nothing to spare. We have also observed that any foreign body

shutter to close automatically. This should help in vour task!"

Your task is to collect all ten crystals and drop them into the ten ventilation shafts.

You have three flying heights - low, cruise. and high. To collect a crystal you fly over it at low altitude. Blue buildings are too high for low altitude flying, and radio-active buildings must be

destroy all nearby rebels – only three are carried on your ship. Laser fire available for continuous fire but with a limited fuel supply. Lasers can be recharged by flying low over ammo-dumps.

By flying over smart-bomb factories you can trigger a chain reaction which will destroy all close rebel life forms within range.

Your ship uses impulse fuel and the rebels have stupidly placed recharge units on the planet's surface which you can use by flying low over them. Your computer presents a head-up display showing altitude, fuel status and position

TAB to restart. Happy killing.

Amstrad happenings, opinions and blah

Hello again

Well, here we all are again. I'm supposed to get involved in some hard-sell here - tell you about how fabulous the magazine is, all that sort of thing. But you already know, don't you? And anyway, there's not really much space.

Instead, I'll just say thanks for welcoming me to your mag and for all the nice things you've said. Thanks, too, for all the whinging, whining and moaning - it's good to know you've got an opinion, even if it's a completely miserable one. No really, thanks.

New Amstrad gadget

We've had an early look at a new electronic organiser from Amstrad. It's called the PDA 600 Pen Pad and it could well be utterly fabulous.

Instead of using a keypad to enter your appointments, addresses and phone numbers, you write them in. The screen is touch sensitive and the built-in software recognises

As soon as we can get hold of one, we'll give you the full lowdown, but if it lives up to its promise it could be the next best thing since, er... since something jolly good, anyway.

Future Entertainment Show

Remember last year when there was the Future Entertainment Show in London and then GamesMaster Live in Birmingham and everybody got confused because they didn't know which one to go to? Well they've solved all that confusion because later this year (from 11 to 14 November), the two events are going to be

combined in one massive event at Olympia. It'll be called the Future Entertainment Show and it'll be fab. No. really.

SD Microsystems

A few of you may have been slightly un-nerved by the very sudden disappearance of SD Microsystems recently. We are at present attempting to find a new contact address or phone number at which they can be reached, and in the mean time, could anyone who is still awaiting products, etc, remember that they can no longer be contacted at SD Microsystems' previous address.

Logon Logoff

French demo team, Logon System, recently announced that they're leaving the CPC. This is apparently due to the attitude of the other CPCers on the scene, ripping music from their demos (Erm... - Ed), copying of the software by their fellow programmers, and generally getting stuck in the average demo writers rut. (So what? - Ed) Good point. Cheerio Logon.

Free Plug

A blatant free plug has been requested by DMP Computer Software, who offer cheap software on tape or disc, for normal or plus machines. Their address is:

Derek Payne, DMP Software, 89 Wolverhampton Road, Codsall, Wolverhampton, England, WV8 1PL.

Printers

Citizen have just announced the release of their new Swift 90C, a 9 pin colour dot matrix printer. due for release in April. The printer will cost £219 plus VAT, and a black and white version (The Swift 90) will go for around £199 plus VAT. It is claimed to fly at speeds up to 216cpi, and make less noise than a normal person talking (or Simon whispering).

You can find Citizen on (0753) 584111.

Pipeline

Since the Pipeline tutorials review a few issues back. Robin Gilbert has added a few more titles to the collection. The extra titles are 'The World Of Sprites' and 'Techniques In Demo Writing'. Pipeline are also offering a range of BASIC tutorial packages, so contact them now on (0656) 740741.

Programmers...

Written any software recently? Feel like getting a project? Campursoft are on the look out for new programmers to add software to their collection, and they want to hear from you. Simply send an example of your work along to Campursoft at 16 Slatefield Street, Gallowgate, Glasgow, B31 1UA. They can be phoned on 041 554 4735.

Having problems?

Do you have trouble getting hold of your regular copy of AA? Just fill in the form and pass it to your newsagent.

want	Amstrad	Action!
r Newsagent, could y	you please order me a copy	y of Amstrad Action, starting

Sound Take

Sentinel Software ■ £24.99 ■ See below for contact

A new sound tracker arrived, so Tim Norris went rooting about in his music collection and got down with some funky Bach.

There comes a time in everyone's computing life when they realise that there's more to all this lark than just playing games and writing letters to the bank. Sooner or later we all wonder what we could do with the machine's musical capabilities. What do you mean, you've never wondered about that at all? Get wondering, it's interesting.

Wachet auf, ruft uns die Stimme."

Canto fermo in Tenore.

achet auf, ruft aus die Stimme".

Soundtrakker is a French-

The Hills Are Alive

Instruments can be created and edited using a fairly straightforward system.

You get a couple of windows in which to jiggle about with the 'envelope' of the sound (the way the volume of the sound changes over time) so you can have smooth sustained sounds, short staccato sounds, sounds that go

wwwwwwaaaaaaaahhhhh - whatever you want as long as you only want them to be variations of the standard CPC tone-type sound. You can add noise as well, and the noise can be controlled in the same way. Mixing them together can produce a broad(ish) variety of moderately pleasing sounds.

designed music package that allows you to create instruments, program tunes and save them to disc, either for fun and amusement or for use at a later date in, for instance, your games.

The CPC, as you may be aware, has three

sound channels. This means that when you're programming music and effects you can have three different things going on at once. In musical terms, this allows you to have a melody and two accompaniment parts, and in Soundtrakker you have access to all three.

Tunes are recorded in short sections, (either one step at a time or in real-time) and these patterns can then be linked together to form whole songs. The pattern lengths are adjustable so that you can program tunes in any of the more common time signatures (mixed time signatures may be a little more tricky) and are sufficiently long that you can use quite short note values.

Time is on my side

Tempo is adjustable, but only in the roughest terms. You can't, for instance, adjust it so that it plays along with some other source, or set it to play at a definite speed. This is okay for game tunes, where strict tempo isn't actually all that important and faster or slower is all you're ever really going to need. But it's no good for serious musical applications and you're probably not going to write a number one hit on it. But you weren't going to try that anyway, were you? So let's get down to specifics. You're

supplied with a set of basic instruments (which you can edit, if you wish) or you can easily create your own. So you load up a couple of sounds and get settled down for a serious programming sesh.

Bach to basics

I decided that writing a tune of my own wouldn't really test the machine's capabilities (I have absolutely no talent) and would take far too long. so I thought a bit of Bach would do the trick. I chose 'Wachet auf, ruft uns die Stimme' (the Lloyds Bank ad tune), because it's got a nice twiddly melody, a moving bass line and a left hand part you can ignore (I wanted to put some drums in on the third track).

So off we go. I loaded a piano as instrument 1, a bass drum as 2, and a snare as 3. Using 'Edit' mode, I set to work programming the melody. The tune's in 4/4 time and the smallest note is a semi-quaver (actually, that's not quite true, but I'll live with that). So if the pattern length is set to 64 (in the 'Set up' menu), we'll be able to program the whole thing in short bursts of four bars of 4/4 with sixteen steps in each bar - just the ticket.

With the instrument set to piano, I just programmed each of the notes onto track one (a quaver takes two steps, a crotchet four, etc). Programming the first four bars took about five minutes. I made a few mistakes with the timing at first but it was a simple matter to play the pattern, find out where it was going wrong, and go back into Edit to put it right. The next four went just as smoothly and so on.

The next step was to chain my four patterns

On the main screen you have info about all the command keys for all the functions.

The Bach starts on the last half beat of a bar with a B flat (in window A). The first beat of the next bar is two steps down.

The sound editor. The sound on display is the piano. It has a sharp staccato attack, holds for a short while and then fades quickly.

You have full access to everything on your disc (including some dodgy demo tunes).

together to form the whole of the first 16 bars of the piece. Piece of cake. Simply go to the Song Edit menu and write the number of each pattern in the relevant box. This means, for instance, that if the piece has a repeated phrase, it's easy to simply tell the machine to play it twice. Anyway, I'd just programmed it straight so the step 01 was pattern 00, step 02 was pattern 01 etc.

Adding the bass line was simply a matter of editing the patterns and programming it onto track three. But why, Tim, didn't you use track two? Ah, yes, well you see, it's all in stereo. Track one goes to the left, track two to the middle and track three to the right. There was method in my madness.

Next up was the drum pattern. I wanted a sort of hip-hop groove thang, so it was a simple matter just to bung a snare drum on the off-beat.

Use it

When you've written your masterpiece, you might want to use it in your new game.

There are full (easy to follow) instructions in the manual and the program will help you too.

It'll be less scary if you have a little machine code knowledge, but even without it it's a piece of cake.

The advantage that Soundtrakker has over other similar programs is that using the Compile option, you can load the tunes into the machine's memory and they'll run on their own while you do stuff elsewhere in the memory. It doesn't sound like much but it's dead important if you're one of those programmer types.

Ĭ	iš". ĔĹ		AŘPE	G.ED	SÉT

86		98		99	98
ä		ää		ÄÄ	ន័ត្ត

The arpeggio editor allows you to, er... edit arpeggios for inclusion in your tunes.

But how does the bass drum pattern go? No problem, just put the program into Record mode and program the bass drum in real time. All I had to do was set the thing running and stab at the relevant key whenever I wanted the bass drum to sound. Once I'd got it just as I wanted it. I was able to copy the rhythm in Edit mode for the other patterns.

Within a little over half an hour's fiddling about I'd sorted out sixteen bars of eighteenth century German musical fun, complete with a hip-hop groove. Isn't technology wonderful?

So simple, even the cat...

It was surprisingly simple to program. Much simpler, for instance, than the sequencer I usually use, and chaining the four patterns together to form a song was even easier.

Everything you need to know is there on screen (all the command keys are listed for you). In fact, when I first sat down with the program we didn't have any instructions at all and I still managed to persuade it to play me some music.

That's definitely the mark of a good piece of programming - something you can use straight away without having to refer to a complicated (and usually badly-written) manual.

The end result of my Bach experiment was

pretty groovy. People wandering past the AA office popped in to find out what was going on and the whole thing was judged to have been something of a success. Just think what 1 could have achieved if I'd written a fab new tune

The bottom line is that if you have any interest in trying to make music on your CPC then this will serve you very well indeed. It's easy to use, it makes a pleasant sound and the sounds are easy to bung into your own programs.

You're not, as I said. going to use it to record a number one single (although, with the way the music scene's going right now, it's not completely beyond the bounds of possibility) but it's a damn good (and inexpensive) way to get down to some serious experimentation.

Verdict

A very smart, easy-touse little program. Good on-screen information and tidy system of menus. It'll keep you musically busy for a goodly long while.

How do those mysterious computer things store stuff? We sent Simon Forrester to find out...

You may think the 3" disc system is expensive. You may curse the fact you ever bought a tapebased machine. But storage really is a wonderful thing. In the next few pages you'll start truly appreciating the incredibly advanced devices we take for granted every time we turn on a CPC.

There are four types of long-term storage in common use - tapes, discs, hard drives, and ROMs. And these are all related to the original monster machines in one way or another.

Grandfathers

The original grand-daddy of computers. Think back to the early computers (not the ZX81, dolt, further than that). In America, they'd just finished the development of ENIAC – the predecessor of today's home computer. They turned it on and, surprisingly, it worked. Why surprisingly? It's got nothing to do with the people who built it. The big surprise comes when you realise that ENIAC had no microchips, no hard drive, no disc drive, no tape slots, or anything like that.

ENIAC worked with valves, ticker tape, and punch cards - just bits of paper with holes in them, the holes representing information. Now... You may not have many bits of punch card next to your trusty CPC, and you've probably never even seen ticker tape, but though the technology was stone-aged in comparison to the way we store data on discs today, the principle remains the same. Read on...

The Tape System

The whole idea of tape drives started with the

large reel-to-reel decks you still see sometimes in old movies. They involved a huge spool of tape inserted into a cabinet, which was read like a movie reel, except for the fact that it held magnetic information. The magnetic information was still, however, a series of 1s and 0s, just as ticker tape contained holes or, erm, otherwise.

Philips saved the day at around the start of the sixties by developing the Philips Compact Cassette (in 1963). Developers saw the opportunity they'd been waiting for. You see, in effect, a computer cassette is just a small piece of ticker tape, except instead of paper with holes, we have tape with magnetic marks.

The Disc System

I must now refer you to a story by a fellow CPC journo, one Auntie John (collective cheers from the cult readership). He sees the revolution of the disc as very simple:

There was once a research scientist at IBM who loved making pizzas. He seemed to spend most of his free time trying to perfect a method of spreading pizza toppings nice and evenly. In the end, he came up with the idea of spinning the pizza, and dropping the topping onto it, creating a pizza covered in nice and even blobs of topping. (He's mad, of course. - Ed) Now... Remember the ticker tape? Yes, you've got it kind of like a ticker tape record player. The blobs of topping represent the binary 1s and 0s, and lo, we have the 8" disc.

The principle for the 3.5" and 3" discs are similar except dropping chocolate on to digestives for 3.5", and Hob-Nobs for 3".

Hard Drives

To get more data on a disc you should, theoretically, just use smaller dots. The one problem with normal disc drives is that the floppy disc has a few short comings. Because the idea of a floppy disc is to have several of them, and insert them into the drive as you need them, floppy discs cannot have the same amount of detail on them - you can't be precise with something that'll be picked up, jarred about, and not exactly precisely grasped by a disc drive.

Answer? Keep a really precise drive (with tiny dots really close together) inside the disc drive all the time. "But what use is just one disc?" Simple – because we can now have tiny dots really close together, we can store huge amounts on this disc.

A hard drive is just several discs (called cylinders), that have incredible detail, due to the fact that they're so well protected by the hard drive itself, and cannot be removed from the drive. This allows 40, 60, or even 80 megabytes of storage space, effectively cutting out the need for floppy discs altogether (except for transporting software between hard drives.

Remember ENIAC? Well, before the magnetic media industry could come up with all these wonderful ways of storing data, the hardware developers had to work on a better way to

Silicon Valley then proved to be the main source of computing raw materials, since, as the name suggests, it happens to be very rich in silicon. Why silicon? Well... The invention of the silicon chip was the next step in microtechnology. To cut a long story short, the silicon chip replaced the huge amount of circuitry, valves and other such cumbersome computer parts. The way in which a microchip works isn't very difficult to understand, either:

ENIAC and her sisters worked in very much the same way that a computer like the CPC

works today. And the secret is binary. You can find a further explanation of the workings of binary elsewhere on this page. A computer processes numbers in binary, performing logic operations on any bit (binary term) with simple AND, OR, NAND, NOR, NOT, and XOR Boolian logical principles. The microchip, then, was no major revolution in processing power. It merely helped in size and speed. Whereas beforehand a computer would have to work with huge currents. etc, a microchip, though performing the same task as a room full of valves, etc, has hundreds of what are effectively microscopic valves, and works with smaller currents (to the point where the current is pretty much static). Because the whole unit is so much smaller, it's faster – I won't go into the full laws of physics – take my word for it.

So this just leaves two loose ends to tie up as far as microchips are concerned. Firstly, where does silicon come into it? Well, silicon is the material chips are built from (it has bizarre electrical properties which enable it to be used for complex switching operations). Secondly, where does all this fit into storage? Well, ever heard of an EPROM?

An EPROM is simply a form of computer memory, similar to RAM, except whereas RAM stands for Random Access Memory, EPROM stands for Erasable Programmable Read Only Memory. More simply, it acts as a chip that can be programmed, allowing storage of software

that can be retrieved at the same speed that a computer can access memory. Your CPC ROM (the bit that makes the CPC a CPC) is just a factory made example of an EPROM (but it's just a ROM - not erasable, and not re-programmable).

As well as the CPC ROM, your CPC can handle many other ROMs, though you'd need a ROMbox (an extra circuit board to hold the extra chips) before you could plug them in. Once you have, however, you could have software like Protext, ROMDOS, Maxam, etc, instantly, without even having to touch a disc or a tape!

Uses

So the western world has developed a series of quite wonderful storage systems for you to use. But what use is all that to you? It all depends on what you want to do.

Tapes

When the CPC464 first came out, it was purely a tape based machine. Since then it has been possible to add various disc drives, but it was originally a tape-based machine.

The cassette found it's niche in the computer market as the primary method of storing data. It provides a cheap alternative for discs, and has a much larger capacity for data (depending on the length of the tape).

The main use of cassettes these days is the sale of commercial software. Considering it's possible to attach a tape drive to almost any CPC

machine, the cassette has become the prime medium for the sale of software. You won't, for instance, find disc-based software for the CPC on the shelves of WHSmiths these days.

Discs

The 3" disc took over from the cassette for most CPC users on the release of the external drive for the 464s, and the release of the 664s, which were soon superseded by the 6128s. They are by far the most popular medium for serious users, as a disc means fast access to large programs, and fast storage of large and previously unmanageable amounts of data.

The only real problems with the 3" disc were first it's lack of storage capacity (it could only hold 180k of data), and secondly, it's price (a blank disc used to cost around £3-4). This problem was soon solved, however, by the addition of a 3.5" drive to the CPC, allowing the use of 3.5" discs, which cost considerably less. Soon after this was discovered, the high capacity package was written, allowing users to store 800k onto one 3.5" disc. Today, the 3.5" disc is still the favourite storage system among serious CPC users, as it's the most practical and economical system to appear.

Hard Drives

it's completely over my head.

Why cover hard drives in a CPC mag? Well, Campursoft have nearly finished development on their latest and probably their best product - a

The Tape **System**

The way in which tapes work is much simpler. In basic terms, the tape is held in a spool on one reel. and ran onto the next, passing over the read head.

The read head works by detecting the changing magnetic field stored by the iron oxide particles on the surface of the tane

There are more heads on a tape deck than a disc drive. because when you want to write to a cassette, the erase head must wipe it clean first, before the write head can record new data on the surface.

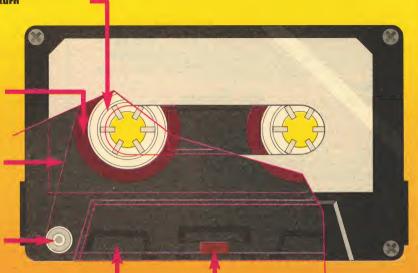

The cog that fits over the pegs, so that the tape can turn

The tape rolled around the spool, ready to nass under the read head

The tape passing down from the spool, ready to be read, and collected on the right hand spool

The rollers, which are infinitely better than having the tape just rubbing across a peg.

ROMs

A cavity to accept the erase The felt pad that keeps the head pushing onto the tape, tape pressed firmly against without trapping it.

40MB hard drive for the CPC.

and become unreadable.

case and spins, really!

As with all hard drives, it will probably be quite costly, but quite a few serious-minded users should find it invaluable. More on that, though, when we get a review version for you.

floppy disc part of the disc onto the read

head. The disc isn't pushed onto the head too

heavily though, it's just got to be held steadily,

so that it doesn't move away from the head

form of storage media, but we assure you that it is. The only difference is that you can't save anything onto a ROM without very technical equipment and a lot of time, so they're not at all suitable as a form of user storage.

A lot of people would dispute that a ROM is a

You can, however, buy serious software on ROM, and providing you have a ROMbox, access it faster than you could from a disc drive. Also, because it's already in a form of memory, it doesn't take up much extra space on your CPC when it's running. Strange, huh?

Who Sells What

In the meantime, there's still a lot of extra storage equipment available from the various software houses and hardware developers.

Tapes

CPC664 and 6128 owners can attach a tape deck to their machines very easily. All you'll need is a tape deck and a lead to connect it to your CPC. You can find the leads in most electrical shop or from OJSoftware for £3.95. If you do want to connect a tape deck to a Plus, then try reading the this months upgrade feature on page 40 for the full details

If you're planning to buy a disc drive, there are several choices, depending on what machine you have, and what drive you want.

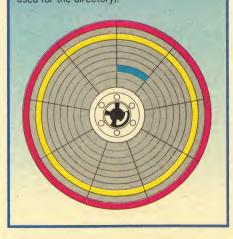

464 owners must have a DDI-1 interface (or equivalent) to add any sort of disc drive. If you want a 3" drive, you've got to buy the DDI-1, complete with interface. But they'll be difficult to find – Amstrad don't make them any more.

464 owners who want a 3.5" drive can find them from either Avatar or Siren software complete with DDI-1 interface (or the nearest equivalent). This will, provided they have the right software, allow them to store 800k on one disc.

Sector Five?

The actual floppy disc is logically arranged into tracks. A track is a concentric circle running around the disc, and shown in the diagram below. On a real disc, there are forty (usually). The directory track (the part of the disc where the list of files is stored), for instance, is the outside ring (track 0) on data discs, or track 2 on CP/M format discs.

Now... To make life even easier, each track is split into nine sectors. This is simply to make the disc drives life easier. as it can find what it wants much faster with the extra guidance of sectors. Each sector can hold 0.5k (512 bytes). This means a track can hold 4.5k, and a disc can hold 180k in total. Take away a few K for the directory (not all of the directory track is used for the directory).

664 and 6128 owners don't have that kind of hassle, however, as they already have the equivalent to the DDI-1 already in their machines (to run the first drive). Therefore, they can add just about any type of drive without worrying about interfaces. They will, unfortunately, only be

The Disc System

If we cut a chunk out of the front of a disc you can see what's going on underneath. The actual floppy disc is attached to what looks like a cog in the centre of the unit. The extra hole in the disc lets the drive know what part of the disc it's looking at – when it passes past the corresponding hole in the

casing, an LED inside the disc drive shines through the hole, and the disc drive knows where it is on the disc.

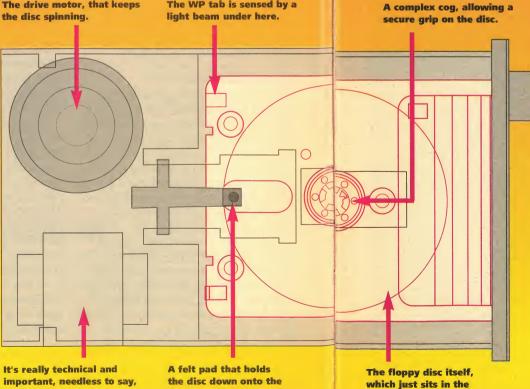

The only extra part is the write protect tab. This is simple. The drive detects whether the tab is in or out, and either allows writing or doesn't accordingly.

from vibrating.

And what happens once you've put your disc into that ominous black hole in the front of your CPC? The diagram below should give you a rough idea. As you can see, a disc drive is just a motors that spins

the disc, and a piece of felt that pushes the actual The WP tab is sensed by a The drive motor, that keeps

able to fit 180k onto any disc, until they get hold of a new Disc Operating System (DOS).

If you want the really in-depth look at all of the DOSes, you should turn to issue 89, where they were reviewed in full. Since that review however. there have been a few developments. In the long run though, you would be best to look into buying S-DOS from STS Software, as it allows higher formats in the A drive as well (for 464 3.5" first drive owners). If you want some nice extra utilities though, ROMDOS XL from Siren Software has copiers and directory editors built in. Remember though – if you want a high capacity 3.5" drive, you'll need a high capacity DOS.

Future Shocks

So what does the future hold in store? Well. you've already read about the hard drive that should be available quite soon, but what else is

When In ROM...

Have you ever wondered why it is that you can have a ROMbox full of ROMs, with word processors, assemblers, tool boxes, disc utilities, etc, and yet you never lose any memory? That's because of the way in which ROMs are patched in to the CPC's memory.

Each ROM sits 'behind' the screen memory, and when initialized (run), is accessed at the same address in memory as the screen (&c000 - 49152), (Confused?

The reason you can't see it on the screen in the form of data is simply because though the CPC finds a ROM when it looks at that part of memory, the screen display system still sees the screen. Strange, but true.

around? Well... You may not see such an item on the CPC, but a lot of machines have CDROM drives attached to the back.

A CDROM drive simply uses a CD instead of a tape, but in exactly the same way. Because CDs are of incredibly good quality, the data can be written to the disc at much higher speeds, taking up less space, and time. Think of a CDROM as a cross between a hard drive (due to it's size), and a ROM (it can't be written to, only read).

The Codemasters did attempt a version of a CDROM, but for reasons unbeknown to this planet, it never really saw the light of day, It did make other 8-bit formats, but never saw the . CPC. It worked on the idea of plugging any CD player into your CPC (via a special cable), and using the CD containing 30 (yes, 30) full games. Maybe the new hardware gurus Campursoft will come up with something, but for now, sadly, you can forget the idea of using CDROM.

All is not lost though! By the time you're reading this, a revolutionary CPC add-on should be sitting under the AA microscope, as we prepare to review Britain's first hard drive for the CPC! All 40MB of it, and for less than the continental 16MB model. This new hard drive will be courtesy of Campursoft, and both AMSDOS and CP/M compatible. Storage wise, the future is looking good. Hold your breath - we are...

Magnetic Storage

Tapes, discs, and hard-drives all use a technique called magnetic storage. It's method of working is really very simple. Whereas punch tape had holes representing 1s, magnetic media uses a small magnetic charge on the ferric oxide surface The read head then moves over the tape, sensing whether there is a charge or not (just as it used to check for holes, except magnetically), reading either 1s or 0s to form whole binary numbers, which can represent absolutely anything the computer wants it to.

Binary

Around this feature you will have heard the term binary. The odds are, if you're new to things such as machine code, etc, you won't quite understand what binary is, or why we use it.

Computers, deep down, can only store two numbers - 1 and 0. These are represented as voltage or no voltage (actually, for the terminally pedantic, they're represented by low and high voltages, the threshold being around 8V), So how can we represent larger numbers in this way? The system we use means we can store any number up to 255 with just eight 1s or 0s (bits),

- The DOS system supplied in 664s, 6128s, and DDI-1 interfaces. It's the Amstrad's DOS.

a – A mathematical logic system invented by English mathematician George Boole and used in computers. / - The amount of data that can be

stored on a particular medium. - A compact disc, with both the qualities of a hard drive (a massive capacity) and a ROM (it can't be written to).

P/M - The secondary CPC language, supplied whenever you buy an Amstrad disc

nder – The equivalent of the floppy disc found inside a hard drive.

a – Information, be it text, programs, numbers, pictures, or whatever. - Disc Operating System. Software

allowing you to use a disc drive. - One of the first computers ever to

be built to cope with modern data operations.

– Erasable Programmable Read Only Memory – A ROM that can be written to with special hardware, and erased with ultra

- The standard computer disc called floppy because the inner disc is actually very, erm, floppy.

- International Business Machines. The eading developers in early hardware, and company responsible for the PC.

- One million bytes, or 1000 kilobytes. Abbreviated as MB.

rd - A piece of card with several rows of what is effectively ticker tape. N – Random Access Memory – Normal computer memory.

M – Read Only Memory, Simply memory that cannot be erased, and so can hold software indefinitely.

x – A facility for inserting ROMs and EPROMs for use in a CPC.

cer Tape – The method of storing data on older computers. A strip of tape with holes representing data.

with each bit representing a value.

Take a look at Fig 2. The binary number 10010111 is the equivalent to the sum 128+16+4+2+1, which equals 151. And you thought it was difficult...

A: drive

You'd like a 3.5" disc drive? Hold on though...

Isn't that a 464 you've got there? What are you going to do? Simon Forrester knows...

A long time ago, you could by DDI-1 disc drives from Amstrad, complete

with a little interface allowing you to use said drive. Now, as anyone who's

tried to get one of those little beasts will tell you, they're not easy to come

by these days - and even when you do get hold of one, you've still got to

pay about £3 for discs that you probably can't find in the shops anyway.

the day (as in all the best novels). To cut a long story short, they've just

* Its interface box is on a cable, instead of on the back of the machine.

up on the old models:

★ It's a 3.5" model!

★ It's about a quarter of the size

exactly got many problems, have you?

comprehensive disc utilities you'll find.

a disc drive.

This is where Simon Cobb's company, Siren Software, step in and save

released an equivalent to the old DDI-1 interface and drive, with a few points

'But what use is a 3.5" inch first drive?' Well... Unless you manage to find

commercial computer software supplied on disc in this day and age (okay,

Nigel Mansell, and maybe Super Cauldron, but that's about it), you haven't

Decent PD Libraries will supply software on 3.5" disc on request, you

can use them just as you would a 3" drive for your normal programming

uses (but fit quite a bit more on them), and even transfer your covertapes

onto them. The only thing you can't do is buy some commercial software on

that format, but the amount of people releasing on 3.5" increases monthly.

It's about time to open the box and see what's inside. First, there's a

nice little grey 3.5" slimline drive. You should also find a large black box

(the disc interface) with two cables attached, a power supply (with a nice

substantial amount of lead, by the way), and finally, the master DOS disc.

could sell you one of them. The beauty lies in the software. On the 3.5"

master disc there's a file called 'disc' which is probably one of the most

of the many useful sub-programs, such as a directory editor, a fast

So. You've got a slimline 3.5" drive, that's nice and quiet, but anyone

Master Disc, presents you with a menu from which you can access one

formatter, a sector editor, de-protector, header reader, file copiers, sector

mappers, file typers, and a disc zipper (it speeds up the drive's operation).

So, with well-written software and a good quality piece of hardware,

the Siren 3.5" drive should satisfy the CPC464 (and plus) owner's need for

The screen format of directory editor is as follows-

3.5 inch

It's am Artithree

So here's good old Tim Blackbond with the final instalment of our 'How To Draw'-type series. All you need now is some ideas and a bit of talent...

If you can remember that far back, we finished off last time with a picture of a house, greatly improved from that in the first part.

This month, we still have window operations and the several other special effects (mainly within *Art Studio*, sorry!).

Let's Look Through The Triangle Window...

The Window operations cover all those that involve defining a block of screen before working on it.

These functions can be found in most other packages under names such as: Cut & Paste or Block. And how very useful they are, because it's here where we find another advantage that computer art has over the paper variety. When Leonardo Da Vinci suddenly decided to put another camel in the background of his paintings, he had to go through the tedious procedure of re-drawing it

(take it from me, camels are very difficult to draw).

By simply selecting 'Define Window' (Art Studio) and drawing a simple rectangle over the area of screen you are interested in editing, it can then be m

editing, it can then be moved, copied, inverted, rotated, rescaled... The list goes on.

For example, on our picture (flick your eyes to the right), say we wanted another tree next to the existing one. A quick window, and hey sesame – two trees!

Don't Paint Over The Red!!!

It may seem strange at first, but (watch out, another Art Studio only operation coming up)
Protect lnks is probably among the most useful functions you could use.

Basically, it does just what it says – protects selected colours from being drawn over. Not only can this be used with normal drawing functions, but also fill, windows and it is almost vital for the Merge Picture function in the FILE menu.

May 1993 AMSTRAD ACTION

In the case of the house picture, the rays of the sun were drawn by putting a red outline around the circle, protecting every colour but blue (the colour of the sky) and using the Rays option from the centre of the sun.

Then, all colours we protected but the red and the outline was removed. An easy, evenly spaced gap between the sun and rays.

And Finally...

That appears to be about all you need to know to draw pictures. Just a smidgen of practice and you'll be producing masterpieces in no time.

Art Studio Tips

★ When drawing picture outlines, turn the Cross-Hair Cursor OFF from Input Devices within the Misc menu. The cross-hair tends to obscure the ♣ start of the line.

★ Draw the main outline of the picture (leaving any really fine parts) in MODE 2, then convert it to the

desired mode. It is easier to draw in a higher resolution.

★ If you haven't got a mouse, get one. Only really patient people can do a half decent work of art using a keyboard or

joystick. They're only about £50, but worth every penny (and you get *Art Studio* free!)

- ★ ...On the other hand, if you find you are best at drawing freehand, check out a back issue of AA and whip yourself up a lightpen, they really are quite smashing accessories.
- ★ In some cases, the palette may need changing for printing. This is because some colours print in the same shades as others (for example, red (INK 3) comes out as black, as does blue (INK 1) and white (INK 13). Try experimenting with different colours to see which looks best (unless you have a colour printer of course!)
- ★ Before starting ANY picture, don't forget to switch the computer on.

If you draw anything on your CPC of which you're particularly proud, send it in and we may even print it. Don't bother if it's a lemming, though.

House-building for beginners – part three

If we add another tree (using Copy Window), we have an instant solution to non-sustainable forests.

A house isn't a home without a few little extra touches, so we'll have to put curtains in the windows.

And everything needs a little brightening up, too. Now it's starting to look quite good.

(Tim, we're a bit puzzled about this – it's the same as the last one.
Where's the duck you promised? – Ed)

(Oh, there it is, in the pond. And a chap at the window, too. Thanks, matey, that's very nice. – Ed)

MASTER DISC

DATA FORMAT	PAGE
UUNERASE EERASE OSET TO R/O DSET T CCHANGE USER PNEXT	O DIR S PAGE M
SDG1	R/H BIR

SELECT OPTION:

The directory edit function. It allows you to change the attributes of files (hidden, read only etc). Useful? Yes, damn right it's useful.

The Down Side?

When you bought a disc drive from Amstrad, you also got two discs containing a package called CP/M. In its full blown glory, it's a very complex and (maybe) very useful programming language, and in its simplest form, it's a fairly average disc utility. Of course, when you buy a Siren drive, you won't get CP/M, so you may miss out on a little bit of PD software, but with Master Disc supplied free, you shouldn't miss much – it's got utilities CP/M junkies only dream of.

Who needs one?

So what's in the box?

Right. As you may or may not already know, your CPC has the facility for extra ROM software to be added (see storage feature).

When you buy a DDI-1 interface, as well as getting the extra plug (for the drive), you get a ROM chip (inside the interface)

that tells the computer that there's a disc drive present, and just how to use it.

This is the only reason we need an interface to plug a disc drive in, but without that ROM, the CPC wouldn't even know there was a disc drive attached.

Where To Go

You can get the drive from Siren Software at: Wilton House Bury Road

Radcliffe Manchester M26 9UR

PRESS (ANY KEY) FOR MORE

With full on-screen instructions, it's practically impossible to go wrong. Don't you wish everything in life were as simple as this?

The file USER number (usually 0 but may from 0-15).

Hot news from the world of Adventure

The Balrog has struggled through thick and thin this month to bring you the latest, most up to date, adventure info around! So glue in those eyes and start reading...

The Balrog Adventure **Competition Results**

The Balg was literally snowed under with entries for the GAC compo. To say 'There were many entries' is a little like saying 'There were a lot of dwarves in The Hobbit'. Or that Gandalf knew a trick or two. Suffice to say that judging this competition has not been an easy task even for a

mighty Balrog. But it has been enjoyable. The majority of entries were of a surprisingly high standard, which leads the Balg to think that software companies should be doing more to seek out untapped talent among our readership.

It was interesting to discover that the range of themes and ideas was quite wide, and not all dungeon-dabbling, despite the obvious Balrog connotations. There were Balrog in Space, Balrog's Manchester Adventure (some rather dodgy ideas in that one – the appropriate authorities have been informed...) and even Carry On Balrog (well, perhaps there wasn't that one, but it might have been interesting if there had been!)

I was also pleasantly surprised to see the number of ways in which people managed to squeeze the most intricate and unusual types of problem out of the GAC environment. It proves

once and for all that programs are constrained only by the ingenuity of the people writing them, no the system they're using.

An early favourite was Balrog's Folly by Alex Prentice from Midlothian. This was based loosely around the AA office, with increasingly bizarre locations as you move deeper into the game. The accompanying literature was of a very high standard, and the value of this side of game production can not be over-stressed, even in a non-commercial environment such as a magazine competition. Infocom realised the potential of heavy packaging emphasis from their early days, and went on to become the most purchased game producers in the adventure market.

Another aspect of this game which I enjoyed was the sense of humour. It was very refreshing, if not always quite hitting the mark! I especially liked the dictionary pun, but you'll have to wait

Novices start here

'But I've never played an adventure before!' I hear you cry. Ummm... Difficult... You see whole tomes have been written on playing adventures, massive manuals included with larger games on learning the basics and the poor Balrog has only two hundred odd words! So I'll be brief.

What is an adventure?

Think of it as an interactive story with you as the central character – what you type affects how the story turns out - whether the hero dies at the hands of a princess or saves the beautiful dragon.

Unfortunately the little CPC can't understand everything you type so adventures have keywords which are used in most games for commonly used actions - these are outlined below.

Moving around

All the compass directions will usually move you between locations (a location being a separately described place such as a forest or prison cell) so east, west, north and south are

acceptable. Sometimes games also use northeast, north-west etc. (abbreviated to NE, NW etc.) as well as up and down. LOOK will redescribe the location you're in.

Manipulating objects

You may see a lamp in the dungeon but what do you do with it? Well, you can GET LAMP. EXAMINE LAMP, LIGHT LAMP, DROP LAMP etc. Experimentation is the key to the game - get to know a game's limitations.

INVENTORY (or I) will list objects you are carrying while WEAR and REMOVE will wear and remove clothing, hats and so on.

Other useful words:

ATTACK, CAST, CLIMB, CLOSE, CUT. DRINK FAT FILL GIVE HIDE JUMP, KNOCK. LISTEN, LOCK, MOVE, OPEN, POUR, PULL, PUSH, PUT, READ, SEARCH, SHAKE, SIT, SLEEP, SMELL, STAND, STAY, THROW, TURN & many more!

Most of all the major point of adventuring is to

and see if it makes it to PD to know quite what that was! The main drawback was the lack of a 'drop' system. Whether this was not implemented due to memory restrictions or for other reasons it did add annoyance to the game especially as you couldn't complete the game with the solution given as you couldn't carry all

the objects needed! The Balg was also very impressed by 11 yearold Mark Zarky(?) from Pinner in Middlesex. Though his descriptions could have been a little better expressed, they had a richness and sense of atmosphere which a great number of entries lacked. Keep at it Mark, a career in adventure writing may well be waiting for you!

And so on to announcing the winner The competition entry

which. after beating all-comers in a fight to the death over several months, was to gain the supreme honour of 'Amstrad Action cover tape' is... Who's Afraid of the Balrog?. Next month you'll be able to enjoy it in all its glory - and you won't be disappointed.

The author is the mighty GAC wizard Marlon, whose cunning and cleverness left most other games standing. The game uses more

locations that most of the entries, yet its only concession to memory versus completeness is the message 'This is GAC remember. Do you realise how much memory that uses?' in response to the request

'GET ALL'. Not only can you examine everything in the adventure, but you can examine things to a level of detail usually only found in far more advanced adventures. Just wait till you try examining your pyjama trousers to see what you can find in them.

The game is quite difficult and should keep even the most adventurous adventurer on their toes, but all the puzzles are logical, if you keep your eyes and brain in gear. I must say I shall be interested to see how many people find the shopping bag on their first wander round the Balrog's domain - answer in a couple of months. The gnome on the lard is perhaps the oddest

thing, but on the whole reality is kept in the forefront. Like a good

> detective novel, the adventure reveals all its clues to the casual observer, but if you're too casual you'll miss them! I'm sure

everyone will agree, when they see it next month, that it was a fabulous effort. So congratulations to Marlon, and to everyone

Contacting the Balrog

else - don't stop writing.

To communicate with the Balg, write to him at: Amstrad Action, 30 Monmouth Street, Bath, BA1 2BW.

Clue sniffing with Balrog

Ahhh! The Balg is running dangerously low on clues so please do the big hairy one a favour and send in your hints and tips on any adventures you've played. This months impressive selection of tips is thanks to Robert Smith (Gwynedd), Richard Jamieson (Aberlour) and Graham Booth (Tadcaster) thanks guys!

Deadenders

- Use kebab bought at Smelli's to free Arfur.
- Give flowers to Loo for information.
- Clean uniform in laundrette.
- Buy pizza in Smelli's.
- Throw steak at Roly to get passed him.
- Open curtains.
- Move barrels in cellar of Old Queen.
- Put photo in wardrobe.

Gerbil Riot of '67

- To get past Ratty Ralph, get picture of cat, show picture to Ralph.
- To go downstairs and passed Count Crackers, go to kitchen, open fridge, get garlic, S, Wx4, N, get bucket, Sx2, D, throw bucket at fire, D, E and eat garlic.
- To get past Coneman the Barbarian, get bulb horn (from Psychiatrists room) and

Helvera Mistress of the Park

- To escape from the cell, press film, hide, press play, escape.
- On landing, drop ladder, climb ladder to get gas mask.
- Dig in garden with spade.
- Get clay, mould clay (with potters wheel), bake clay in oven.
- In library, jump on carpet to kill scorpion.

Quest for the Golden Egg-cup.

- Give beans to guard.
- Search straw to find card.
- Give bottle to Wongo.
- Put all useless items in burrow.
- Wave wand to cross crevasse.
- Release caged bird to get rid of Guardian.

Smashed

- Pin is under seat of jeep.
- Rub fries on locket to get chocolate.
- Call Rancid on Tandy.
- Chocolate will make Rancid tell you the password.

Yarkon Blues II Part 1

 Examine seat, get tool box, D, Sx2, U, N, put tool box in force field, get hacksaw, S, D, Wx2, cut bar, cut bar, exam supplies, get plaster, Ex2, exam junk, exam pipe, put plaster over gash, get remote control.

Lords & Ladies of Adventure

If you have a problem with any of the following games, simply drop a line to the person who knows what's what. Send them an SAE and wait patiently by your letter box. Don't ask for complete solutions, though or you'll be disappointed.

Assembly Casembly

Simon Forrester sinks his teeth into a few more unsuspecting BASIC programmers, and shackles them to part two of his machine code series as "punishment for their sins".

Right. You've had your gentle introduction to the mysteries of machine code programming in the form of string printing.

Now it's time to look at what else we can do with ASCII characters. First off, lets look at reading them from the keyboard:

org &4000 limit &4fff call &bb06 call &bb5a jp loop

Simple huh?

org &4000

.loop

cp &fc

ret z

cp &7f

cp &0d

Timit &4fff

call &bb06

call z,delete

call z,enter

call &bb5a

jp loop

.delete

1d a.&08

call &bb5a

The firmware call you'll be new to (probably) is &bb06 which simply checks the keyboard and waits till a key is pressed, and returns with the ASCII value of that character in the a register. Ouite handy, then, that &bb5A prints the character in the a register. You don't even have

Here it is, the completed program.

to swap registers! The bummer of all this is that though you can type lots of lovely things, you can't break out of the program again so you have to reset the machine (switch it off and switch it on again). Oh dear. You've just lost all your hard work! All six lines of it!

All is not lost

All Done - that listing in full

ld a,&10

call &bb5a ld a,&Oa

ret

.enter

The easy answer to this is to wait for the user to press a special key (such as the ESCAPE key), and exit the program when (s)he does. Sounds simple, doesn't it? It is. So how do we check for these special keys?

Well... We know the character comes out of

And, to stop complaints, here's a BASIC

version for all non-assembler owners out

there. Tack the DATA statements on to the

end of the loader given last month. Refer

to that article for more instructions.

HAHC 100 DATA CD, 06, BB, FE, FC, C8, FE, 7F

GAAN 110 DATA CC, 16, 40, FE, 0D, CC, 1E, 40

GAML 120.DATA.CD, 5A, BB, C3, 00, 40, 3E, 08

GAFP 130 DATA CD, 5A, BB, 3E, 10, C9, CD, 5A

EAMN 140 DATA BB, 3E, 0A, C9, **

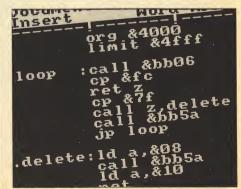

&bb06 in the a register.

So if we can find the value for the ESCAPE key, it would simply be a matter of getting the program to check for it. This brings our listing to the following:

limit &4fff call &bb06 ep &fc ret z call &hh5a jp loop

org &4000

The extra lines we've added work quite simply. The first compares the a register to &FC (the code for ESCAPE), and sets the z flag accordingly (remember from last month?). The next line returns if the z flag is set. If the flag isn't set though, it'll carry on as normal. Getting the hang of it yet?

It's starting to take shape before your eyes.

Warnings: It won't be long now before you understand

what screens like this are trying to tell you.

Not more problems?

Unfortunately, there's another fly in the ointment. Actually, two. It was going to be one but we really need to get up some pace. Run the code, and type for a bit. Now press RETURN. Type some more. Oh no! It doesn't move down a line! You end up typing over stuff you've already typed! We'd better rub it out. Oh no! DELETE doesn't work either!

What shall we do? I'll tell you what. We'll look to the box entitled "All Done - that listing in full" for the completed listing (no, really), and then read the explanation below.

Just the facts, ma'am

The extra compare lines check for the specific characters, depending on the state of the z flag, and then calls the corresponding routines.

First, there's delete. Here, we print the ASCII control code to move the cursor back one character, then we load the a register with the value to clear the current cursor position. The reason we don't bother printing this character is that there's a call to **&bb5a** in the main program anyway, so we may as well use that. As for the routine called enter, take a look in your manual for the control codes, and see if you can work it out for yourself.

You can call me firmware

So, the new firmware routine this month is: &BB06 - Wait Key

This call waits for a key to be pressed and returns the ASCII value in the a register.

What have you learned?

This month, believe it or not, you've experienced

Just What Is Going On?

Don't tell me, you missed the first episode. Or maybe all this stuff is slightly going over your head. Right. So back to the start..

The listings in the main article (you'll find them in a CPC font for easy reading) are assembly listings. Assembly language is a language that an assembler (catching a pattern vet?) assembles (now?) into machine code.

So let's go for a walk through that first

This is not an assembly command. It's an assembler instruction. This means that instead of being a part of the actual program, it's passing a message onto the assembler about what it wants the assembler to do. This, for example, tells the assembler to locate the finished code at &4000 (which is a hexadecimal number), or 16384 (in decimal, though get used to hex, as that's what we'll be using from now on).

limit &4fff

Another assembler instruction, telling the assembler not to let the program run too far through memory. With the command set up the way it is here, the program will not be allowed to exceed 4k in length (go about &4fff).

anal.

Yet another assembler instruction, marking this point of the program with the label (name) loop. We use this method because we don't have line numbers, and need some way to refer to different parts of the program.

call &bb06

Finally – a machine code instruction! This command calls (equivalent of BASIC's GOSUB) a routine to wait for a key to be pressed, and send the ASCII value back in the A register.

Another instruction to print the ASCII character corresponding to the number held in the A register.

jp loop

Remember that label earlier? This is the jump (equivalent of GOTO) to that point in the program. So go back to the line .loop, and start again from there!

a large amount of flow of operation. (No, wait a moment, I've been jolly patient with all this jargon wibble, but that's it. What, exactly, is 'flow of operation'? Do you mean there's a lot going on? - Ed) It means the way in which a program flows, branches, and jumps around to various subroutines. (I thought so. There's a lot going on. – Ed) For instance – in the program we've just written, there were several branches leading to the various return and delete routines. One important point you'll need to remember is that after the cp instructions, if the two numbers are different, the program does not branch off, but continues in a straight line.

The next thing you may find useful is remembering at all times the basic similarity between instructions in m/code and commands

For instance - The m/code call command is identical to BASIC's GOSUB. The m/code ip is

35555555555555555555555555555555555555	ාමක යන්න කරන කරන කරන කරන කරන කරන කරන කරන කරන කර	99999999999999999999999999999999999999	99999999999999999999999999999999999999	00000014000000000000000000000000000000	90000044000000000000000000000000000000

And here's some code we prepared earlier.

just GOTO, and the m/code ret is simply RETURN. The only thing to remember is that instead of having line numbers, we have labels to represent the places we want to iump to.

Hexadecimal

You'll probably have been panicking about the use of hexadecimal numbers so far. Read on!

Hexadecimal numbers count in base 16 instead of base 10. This means that instead of counting 1 - 10, we count 1 - 16. However, for the numbers 10 - 15 (16, just like 10, is a two figure number), we use letters, to keep things tidy. These letters run from A - F. So how do they look when they're running? Below are a few simple conversions for you to get the hang of things. Remember though, hexadecimal numbers are always prefixed with &.

Hex	Dec
&00	00
&01	01
&09	09
&0a	10
&Of	15
&10	16
&19	25
&1a	26
&1f	31
&20	32

And just like decimal numbers, we can add more columns (powers) at the left hand side of the number. Only instead of decimal having

powers ^10, we have powers ^16:

Hex	Dec	
& ff	255	
& 100	256	
& 1ff	511	
& 200	522	
& fff	4095	
&1000	4096	
&ffff	65535	

There you go then... It wasn't that difficult, was it! It was? Read through it again. Once you get the hang of it, everything's a million times easier.

Technical E O CONTROL OF THE CO

You want techie stuff? You got it. Write to Richard Fairhurst at Technical Forum, **Amstrad Action, 30 Monmouth Street, Bath, BA1** 2BW and he'll put you right.

Chip confusion

Looking through the latest AA I spotted in the Small Ads section two ads for a ROM box with the 464 upgrade ROM in them (40025). I thought that the ROM didn't work in a ROM box and had to be fitted inside the machine replacing the existing chip - is this true?

Once a 464 is upgraded, when you order an add-on for the back (e.g. mouse interface), do you ask for a 464 or 6128 interface?

B. Proctor **Leighton Buzzard**

A specific ROM-board, known as the ROMboard Xtra, was the only one that let you put a 6128 ROM in it as an upgrade for 464s. Unfortunately. the manufacturer (Microstyle) is long since deceased, and its reincarnation, Avatar, no longer produces the board. If you have a 464

where the original chip is soldered in, a secondhand ROMboard Xtra is a worthwhile investment.

Ask for a 464 interface when you've upgraded your machine. The only differences will be in the interface's design, to accommodate the different design of the two machines: if you already have an interface connected with a through port, you can put any interface on the back of this anyway.

Character assassination

I need help with a demo I'm writing in BASIC. I want to use the fonts from the AA89 covertage without loading the font-loader program. I have got it to say 'Font filename', but I have to swap discs because the font that I want to use won't transfer to my other discs separately. Here is what I have written in my program:

20 INPUT "Font filename";f\$ 30 SYMBOL AFTER 32: h=HIMEM+1: LOAD f\$+".fnt",h **Andrew Waddington**

If you just enter these two lines, and add a new one, you'll have a routine to copy a font from disc to disc. Add this line:

40 CALL &BB18: SAVE f\$+",fnt",b,h,8*96

The CALL &BB18 waits for you to press a key (handy short-cut number 83), and the SAVE command saves out the font data again. So RUN

the program, enter your font name, and when the disc drive has finished whirring, insert the new disc and press a key.

Drive

I have recently been given a 3.5" drive. The person (my uncle) who gave it to me said that it would work on an Amstrad, but I can't see how to get it to do this. Unlike my friend's cased drive with its own power supply, this one is very bare (you can see its workings underneath), has no connector for the CPC, and there is nowhere that I can plug it into the mains. I know nothing about electronics, so can I just buy a connector and power supply, or how else do I get it working? I have a CPC 6128.

Ben Alexander

Your drive is indeed suitable for an Amstrad - an Amstrad PC. However, it will work on your CPC with a bit of persuasion, notably an appropriate lead, a modification to the disc drive (pin 34, the Ready line, needs to be grounded so that the CPC doesn't complain 'disc missing', because PC drives do not use this signal), and a power source - which is the most difficult bit. Rob Scott at STS (081 317 3536) will fit it to your CPC if vou're not confident enough to do it vourself: probably a good idea, as playing around with power supplies is not something for the novice!

Incidentally, drives like this can be picked up at computer fairs (notably the All Formats Computer Fairs) for £25 to £30. If you can get hold of one of these, the saving over buying one from an off-the-shelf drive supplier is probably worth thinking about.

Coloured judgment

- 1. Can you make multi-coloured CHR\$? If so, how? 2. Can you buy ink-jet printers compatible with
- 3. Please can you put Crystal Kingdom Dizzy and Les Stars on the covertape.

Jonathan Rylands

1. Well, sort of. You can't actually define multicoloured characters, but the effect can be achieved by using transparent printing mode (character 22 followed by character 1 to turn on, or 0 to turn off) and printing a different character for each colour. For example, this prints a threecoloured character:

10 PRINT CHR\$(22); CHR\$(1);

Disobedient discs

I'm writing a machine code disc-based database. The program is held in a few parts. (main code and loading screen). It works fine on drive A, but I'm having problems when I try to run it from drive B: the computer looks for the files it needs to load on drive A, and complains because they're not there. What's wrong?

Steve Piper Huntingdon

> When initialised (by the firmware CALLs at &BCCB or &BCCE), the disc system resets itself to drive A, user O.

There's no way of stopping it doing this, unfortunately. However, you can save the current drive settings, initialise the ROM, and then restore the settings again.

This isn't too difficult. The drive number is held in the first byte of AMSDOS workspace, and the user number in the next byte. To find

30 LOCATE 1.1: PEN 2: PRINT CHR\$(130):

40 LOCATE 1,1: PEN 3: PRINT CHR\$(148);

retrieve HL ; get the new workspace location ; and put the two bytes back!

each of the two 16k chunks, and another for the 3k remainder. Hey presto: your file is back!

Author, author!

I have written a novel using my CPC and Protext. A publisher is interested in it, but won't handle it unless I supply it on a 3.5" PC disk. I have sent them a copy saved on my Siren 3.5" drive, but apparently it doesn't work. Is there any way I can get it onto a PC disk, or do I have to pay our local secretarial office a fat sum to type it all in on their Compag PC?

Daphne Williamson

There are several ways you can solve this problem. One way would be to run up a wire between the two machines (known as a serial link), but this is quite expensive and not really practical unless your CPC is near to the PC. This leaves you with two choices: either pay one of the many data transfer bureaux to convert your book onto a PC format disk (any which claim to cope with Amstrad PCW disks are okay), or buy a nifty little program for your CPC called 2-in-1.

You'll probably be looking at a £15 fee at a data transfer bureau anyway, so buying 2-in-1 at around a tenner more is a worthwhile investment: you can then carry out as many transfers as you like without future expense. Campursoft (041 554 4735) can sell you a copy.

As Protext isn't very popular on other machines, your publisher will almost certainly not be able to make sense of the Protext document. You need to save it as ASCII, which as it contains only the text and no Protext-specific formatting information (ruler lines etc.), can be read by any word-processor. To do this from Protext, load your document, enter program mode (with the PROG command) and then re-save.

RAMmed ROM

I have a Microstyle RAM-ROM, which I am not at all happy with. Sometimes, when I have it

RAM-ROM is unplugged, so I assume that it is its fault. Should I send it back, or is this a design fault? (I have Protext and Maxam 1.5 on ROM, is it compatible with both of these?) **Terry Jones** London Not the Terry Jones, surely ...? Anyway, yes, the problem you are experiencing is a design fault.

plugged in and am using Protext, I have

accidentally entered either of the letters 'C' or 'E' as a command – an easy thing to do for clumsy typists like me when you want to enter the 'D'

command for document mode. This causes the

computer to crash. It does not happen if the

The RAM-ROM does not reset its memory when your CPC is switched on, and if certain combinations of bytes appear there, the CPC thinks that there is in fact a ROM in that location. When you enter a 'C' or 'E' command, the computer searches through all the ROMs available - including the 'phantom' in the RAM-

ROM. If it then finds it there, it jumps to where the ROM's command handler should be. Unfortunately, there is no command handler in the phantom ROM, which is filled with garbage, and so the machine crashes.

To remove these phantoms, enter Maxam, select the ROM which is mapped in by the switches on the RAM-ROM (using the S command), and Edit from address &C000. Switch the left-most switch on the unit to the left, and hold the 'F' key down until the top row is full of 'FF's. Then turn the switch to the right, and quit Maxam. The CPC thinks there's no ROM in that 'socket', and stops finding commands there.

Hey, kid, rock and roll

Some games I have (Space Harrier and Super Cvcle), as well as some PD demos, are unusable because the screen is constantly rolling down the monitor. I have heard that there are different models of video chip in CPCs, could this be the problem? I have an Amstrad CPC 6128.

Phil Anderson Bradford

Nothing so exotic, I'm afraid: there are different models of video chip, but that's not the problem. The down-to-earth answer is: adjust the vertical hold control on your monitor! Some software is more susceptible to the position of this than others, and it's perfectly possible that you won't have noticed it before. The control is at the front of green screen monitors (easy to get at), and the back of colour displays (a real pain!). Fiddle with it while the offending program is running, and stop when the display is okay.

Publish and be... rich?

I hope you can help me. I would like to start a fanzine, but since photocopying is expensive and unreliable, I would like to produce it on disc. Will this be easy? What programs do I need? How much should I charge for the fanzine? Pete 'The Beat' Robins

Dartford

Anyone can produce a paper fanzine, but it →

May 1993 AMSTRAD ACTION

The right connections?

I bought an Amstrad 6128 in Germany a few years ago, then I sent off for a speech synthesiser from dk'Tronics which I thought would be good for the children. I found that when I received it, the port for the synth was too small. dk'Tronics inform me I have a 6128 Plus (apparently European models are) and to enable me to use my synth I have to buy a modifier which will cost me a tenner!

After all that... could you guide me to my next plan of action?

Should I have it modified, buy a mouse and other accessories so I and my kids can get the most of our machine, or ...?

Please help – usually I'm a sane, logical person who deals with loads of things, but this is doin' my 'ead in! Em McKie

Poole

Hmmm. It would be nice if all CPCs bought on the continent were Plus-es. Unfortunately, this

isn't quite the case. Rather, some of these perfectly normal CPCs have Plus-type Amphenol connectors, to comply with the strict European radio interference laws (especially in Germany). These means that, to use British peripherals, you do need to buy a 'modifier' – or widget, as they are known to the initiated. Try WAVE on

Remember that very few programs use the speech synthesiser: you'll have to program it yourself. As to your next steps, a mouse is useful if you're really into computer art, otherwise pretty pointless: possible ideas could be a Multiface (to poke games and to back up tapes), a 3.5" drive with operating system (for cheap storage), a ROM-board (to let you use top ROM software like Protext), or even a flash new printer.

Don't buy things for the sake of it, though much as hardware vendors would like you to think otherwise, your basic 6128 setup is still perfectly good!

20 LOCATE 1,1: PEN 1: PRINT CHR\$(129);

takes quite a bit of effort to get it looking reasonably professional. Similarly, it's easy to produce a simple disc fanzine, but you'll need to put some work into it. Knowledge of machine code isn't strictly necessary but a reasonable knowledge of BASIC is, especially of its graphics and text facilities. The fanzine will also be much better if either you, or a friend, can draw and write music.

Three programs are pretty much essential: a disc copier (otherwise no-one will see your masterpiece), an art package, and a music program. There are plenty of good disc copiers in the public domain, the best being Crown's excellent Crime, which any PD library worth its salt should stock. Top art package is Advanced Art Studio (£17.95 from MJC Supplies, 0462 481166), which only runs on 128k machines: 64k owners will find GPaint (search through your pile of AA covertapes!) a good enough alternative. For music, well you've got BooTracker now, haven't you?

You won't become rich producing a CPC fanzine: stick to under a quid price-wise. Alternatively, you may want to follow the Continental approach and make your fanzine PD and completely free. You won't have to copy many, either - the PD libraries and the underground network will ensure it gets around.

First disc

Perth

I have just bought a second-hand 464, and I need some advice. I had hoped to buy a disc drive, but the local shop suggests I'll have to send to England for one. Do I have to order a particular model of drive, or will any disc drive do? I read in AA89 about disc drives: in particular I noted that S-DOS is the better disc drive. Would I be able to buy an S-DOS disc drive for my computer?

What sort of accessories would I need to buy to connect a drive to my 464? I have been told that it is very difficult to buy disc games for a 464 as they are usually 128k only, is this correct? I have also been told that I would find it very hard to buy games for a 3.5" disc drive. Michael Hampton

Disc drives aren't easy to buy for 464s any more. You have to buy a drive that comes with an interface designed for the 464: otherwise the computer won't know what to do with the disc drive! The original Amstrad model, the DDI-1, is no longer in production: however, you may be able to pick one up second-hand (try the AA Small Ads) for around £60. This uses 3" discs, which are standard for the CPC: all CPC disc games use this size. However, blank 3" discs are expensive and difficult to get hold of.

Alternatively, you could buy a 3.5" disc drive from Siren Software (061 724 7572) for £160. Blank 3.5" discs are readily available and cheap. but since Amstrad games are supplied on 3" disc. Siren supply a nifty gadget called a Multiface, which transfers tape games to disc. (By the way, don't worry too much about 128konly games. There are quite a few about, but the majority by far will work fine on your 464.)

S-DOS isn't a disc drive, but a program which lets you store more on a 3.5" disc than usual: in fact, you'd be looking at 180k per disc with the Siren drive, but S-DOS bumps this up to 400k. and with the addition of a cheap side switch from Avatar (on 0442 251 705), a massive 800k.

S-DOS is available for £12.95 from STS Software (081 317 3536). It comes on a ROM (a type of silicon chip), which means that S-DOS is ready when your computer is switched on: to plug it in, you need a ROM-board, available from numerous suppliers who advertise in AA. This will also let you use other programs that are supplied on ROM, such as word-processors and programming utilities.

That's the end for another month. Just keep you techie queries flooding in and Richard'll keep answering them. He's that kind of guy.

Top Tips

Vanishing act

I've discovered a weird bug on my 464. If you enter the first line of your program as 10 REM followed by a space and a right-pointing arrow (press TAB), and make the next line anything at all (it won't get executed), the program will delete itself when you RUN it.

Make sure the program doesn't contain any GOTOs, because the program will try to GOTO a now non-existent line and stop in protest. **Nelson Armstrong** Glasgow

Very strange! By the way, 664 and 6128 owners will have to make do without this 'feature' - Locomotive Software seem to have fixed the bug for BASIC 1.1.

Program slimming

If you want to reduce the size of your BASIC programs, here's an ideal way to do it. It speeds them up as well, all without having to strip out any program code.

Save your program as ASCII (SAVE 'filename', A), and then POKE &ACOO, 1. Then reload it. All the unnecessary spaces which you may have copied at the end of a line or, for example, inserted between the command and the inverted commas in a PRINT statement, have been stripped out. You can then re-save the program as per usual.

Another good way to speed programs up, if you don't use any floating point (ie not whole) numbers, is to put DEFINT a-z at the start. This tells the computer to treat all numbers as

integers (whole), so saving a lot of messing about with unnecessary and complicated floating point arithmetic.

Stuart Skinner Wolverhampton

The Shadows

Here's a good way to produce impressive text with the GPaint art package you supplied on an AA covertape. Enter your text using the 'text' option from the S menu, and place it on the screen. Move the cursor right by one pixel, and press R to repeat the operation. Move it right and press R again. Now move back by pressing cursor left twice, and move down a line.

Repeat this for the next two lines, so you have a really thick layer of text. Then move up to the original cursor position, and move up and left once. Change ink using the C key. Put another thick layer of text on, and move back to the first cursor position for this layer.

Finally, change ink using the C key again, and move down and right once. Now press R. You will have a really impressive 3D-shadow effect, which looks great for titles (especially on loading screens). By using a similar technique, many different effects are possible! Matthew Khan

Powys

Tasword troubles

Are there any other frustrated Tasword 6128 owners out there who have found, like me, that the program will not print codes 214-218 and 246–250 through an 8-bit printer port?

The reason for this is that Tasword 6128 reserves the corresponding printer control codes (inverse V to Z and v to z) for use with

Tasprint, which gives high quality print from a 9pin printer. The way the program is written, these codes are stripped out before printing, and so some of the graphics available on modern printers cannot be accessed. Tasman Software were unable to give me any help, but I have found that the following patch will allow all the codes to be printed though, of course, Tasprint is no longer available.

Load up Tasword as usual, select B from the menu for BASIC, and type:

POKE 26279.151 POKE 26280.50

POKE 26281,40 POKE 26282.26

POKE 26283.241

POKE 26284,195

POKE 26285.243 POKE 26286, 192

Finally, type RUN to re-enter Tasword. Now replace the disc with another and save the modified program with T from the main menu.

Since Tasprint has gone, the dedicated printer control codes can be used in any way you like, though they cannot be altered from the customise option, which only goes up to T. However, the codes (up to five for each letter) can be poked directly into memory, and the program re-saved as above. The starting places are (for upper case codes): 19848 for V. 19853 for W, 19858 for X, 19863 for Y, and 19868 for Z. For lower case codes, add 148 to these numbers (so lower case X is 20006).

I can't guarantee that there'll be no snags, but I haven't come across any since I installed it. Hope this will prove as valuable to other Tasword users as it has to me.

Tony Cullingworth Slough

The Ultimate notities and

🎮 o you can't write computer games? I bet you've got a few good ideas though! Read on...

Your mission, should you decide to accept it, is to come up with a totally original (well, slightly original) concept for a CPC game, in just two months. Don't worry though, this page won't self destruct - you haven't finished reading it yet. You see, we've especially commissioned one of the best CPC programmers around to take the winning concept and turn it into a fully functioning game, ready for the covertape. But hurry up, as all entries must be with us by 30 June 1993.

That's right - you could have your name in lights (well, print anyway) and we'll probably chuck in a few other bits and pieces as well, just to make it worth your while. So, send your original ideas, with drawings if you want, to:

Rules:

- All entries in by the 30th of June
- The editors decision is final
- So there

The Programmer

So who have we got to turn your idea into a master game? Just take a look at some of these screenshots by way of a portfolio.

back the first one falls over again. Tricky

Software

So you've written your masterpiece in software, and you've spent months polishing it until it's ready for sale. So what now? Simon Forrester takes you from here to commercial success...

So you want to get your program seen by the millions (well, 10s, at least)? Last month, we said you had three chances of doing just that. Well nothing's changed since last month. That's the fast world of the CPC for you.

Send It To A Software House

The average software house is simply a company that will take your program, duplicate it, print manuals, and sell it – be that by mail order (companies like Siren, Campursoft, etc). or direct to the retailer (companies like Codemasters, Alternative, etc, who will place your game in WH Smith's, Joe Bloggs' Computer Wares, Fred's Sprockets, etc).

In return for making profits from your software, the software house will give you some moolah. This is either in the form of a single payment or a royalty (a small chunk of the profit from each copy sold). You may be offered a combination of both, such as a small (but healthy) sum, followed by some more royalties once the money owed to you has exceeded that original sum you were paid.

One thing to bear in mind is that dough upfront suggests that the software house is pretty healthy (i.e. not broke), and that they're fairly sure your work is going to sell.

From that point on, the whole affair should be out of your hands. The only thing that you should be bothered with is spending the money that should pour through your door (hahahaha) from that moment onwards.

You may be offered a deal in which you must provide the software house with the duplicated copies. A word of warning: Never accept anything along those lines. It just means that the software house is not prepared to stake anything on your software, and they'd prefer you to do the donkey work

Of course, some software houses actually

commission a programmer to take on a project in the first place. However, software houses with sense will only do this with programmers they trust, and probably only programmers they've used before. Try sending a sample of your work though, as if they can see what you can do, they'll have a good idea of what (if anything don't get your hopes up) they can send your way.

Guidelines

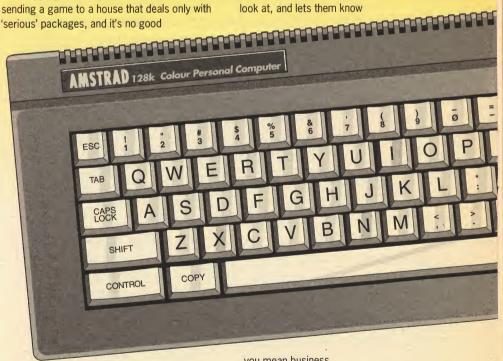

Let's not beat around the bush here – there are a good many dangers and pitfalls in dealing with software houses. Here are a few pointers to follow:

 Make sure you've selected a software house that's appropriate for your software. It's no good sending a game to a house that deals only with 'serious' packages, and it's no good

produced a truly excellent game, but they couldn't get a working copy to any software house for them to see it!

 Try to include a 'fingerprint' somewhere within your code. If, then, you should come across a pirated version of your work, you can tell which copy it originated from - you should be able to tell from the fingerprint on the software which company it was sent to originally. Also go to great lengths to ensure that a pirate won't stumble across your fingerprint and remove it that's defeated the object of the exercise.

 Phone the software company before sending anything along. This alerts whoever deals with new submissions to the fact that you are about to send them something that they really ought to look at, and lets them know

sending your latest disc utility suite to, say, Codemasters.

 Make sure you submit software on disc – it makes software houses a lot more receptive, as they don't have to mess around with cassettes and silly loading systems. If, however, you don't have a disc drive, try to find someone that has, and get them to transfer it. If you really have to send anything on tape, make sure the tape you create works on other machines! There has been a recent example of a programming team who've you mean business.

 Don't get annoyed if the program comes back to you with a list of modifications to be made. Any software company worth it's salt will want the odd thing changing before they are ready to commit themselves.

 Any financial arrangements should be influenced by the effort you put into the software, and the size of the company. Most companies now would not be prepared to pay fortunes for any work, so bear that in mind. If you are desperately unhappy with the deal you have been

offered, shop around, and see what other people would be prepared to offer you.

 All final arrangements should be in writing, which you should sign. Without your written permission a software house cannot do anything with your work

 If you wish, take out copyright protection measures on your software before sending it anywhere. This allows you to prove that the software was your work originally. The odds are you'll never need to play that kind of card, but if you do feel a little insecure, it's peace of mind. For copyright information, take a look at the box titled 'Right To Copy?' .

Sell It Yourself

Terrifying prospect, huh? This actually means (in effect) setting up your own software house. It also means that you can keep all the money you make for yourself, instead of having a software house take a cut - and it's not as difficult as you may at first think. It definitely doesn't involve a massive financial outlay, or any major commitment.

Right – down to basics. All you'll be doing as a software house is advertising the availability of your software, taking orders, and filling them by sending your program out to your customers.

So first off, the advertising. There are three ways of telling Joe Public that there's software for sale. Firstly, you can send your work to AA

15

f4

f1

Right To Copy?

a tricky one. The whole point of the copyright system is to protect the original authors of any work against someone ripping them off and taking all the credit, money, and glory.

When you write a piece of software, you automatically own the copyright on that work. This means that if anyone starts selling your work without your permission, or if someone takes your work and puts their name on it, they are breaking the law. In a disputed situation, you may have to offer proof that you wrote the software. One example of such proof could be full developmental notes, for example.

crammed in with a few hundred others.

The third way to advertise is to take out a real-life grown-up industrial ad. These can cost around £160 for a quarter page mono (black and white) ad in AA, so you really ought to consider all your options before you commit yourself, and make sure you know what you're getting into.

But one way or another, you'll have got your message through to the public. What now? Simply take the orders, and send out the software! There are still a

DISC DRIVE

CPC6128

Another method of proof is, before you by registered post to a morally respected figure of society (a lawyer, headmaster, doctor, etc) who is not a relative of yours. They must not open the package, but keep it safe, so that you have proof that you wrote the software (include your working notes as well) at that particular time (registered post is dated).

An even simpler way is to send the package to yourself, again leaving it unopened.

Of course, you may never end up in that strict a situation, but making it known that you do have proof of authorship could act as quite an effective deterrent to any potentially unscrupulous figures.

problems if you change address, or anyone you live with gets annoyed at all the mail and/or phone calls (even if you don't publish your number, the general public will get hold of it somehow). You can get full details on this kind of box at your local main post office.

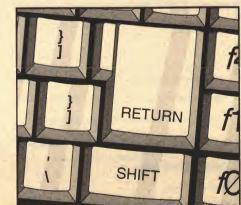

Of course - your software house doesn't have to end there. Once you've become known on the scene (if you're releasing a piece of software, your name will spread), you might receive submissions from other authors, who want you to sell their software for them. If you are confident that you can do it, why not give it a try? After all, you've already ironed out the bugs of your sales scheme with your first release.

Give It To Public Domain

There are three main reasons why you should give your work to the public domain circuit.

- Your software isn't really up to the standard of full commercial sale.
- You don't really want to enter into the hassle of selling it yourself, and you couldn't find an interested software house.
- You're one of those people who believes in good quality software for the general CPCing masses, at very low prices.

Putting software into the public domain is very easy, as the scene is really quite accessible to anybody who wants to get involved. All you have to do is send your work along to a library, explaining that you want it to be public domain, and bingo! You won't get any money for your software (in case you didn't realise) as that would ruin the whole idea of public domain, but you do get recognition as a good programmer.

May 1993 AMSTRAD ACTION

we'll happily print the name, address, and even phone number of the software company if they wish. The down side of this is, of course, that your software has to be quite good – we'll be honest about a program and a bad review is worse than getting no publicity at all. But if your work is up to scratch, you've effectively picked up a free page of advertisement!

Your second advertising option is to take out an ad in the small ads pages. This is absolutely free, but you are limited in the amount of words you can put in your ad, and remember that they don't exactly attract people's attention being

few guidelines to follow though:

- Be sure of your product. Your best bet is to give a copy to a friend, and ask them to be really picky - they'll find glitches in your software that would have made it look like a totally amateur production.
- Get a bank account you can't expect customers to send cash through the post, and you'll need some way to cash their cheques.
- Make sure you can fill any order a soon as possible. If you can't get the finished product back to the customer within 28 days, you may as well not bother with this whole software lark.
- Take out a post office box for a mailing address. This means you won't have any

Sold out! Issues 1-65 ● Still available! Issues 66, 75-82

Issue 84; On the tape: Famous Five, the complete game. Inside! Review of Hideous, Virtual Reality special, the best 3D CPC games and colour printing special.

Issue 85: A look at music-making on the Amstrad, a WIMP interface and a PowerPage tutorial On t'tane two full games - On The Run and Link

Issue 86: Feature on Alternative's kid's TV licences plus review of the Picasso art package. On the tape - Glider Rider (full game), MIDI demo and three utilities.

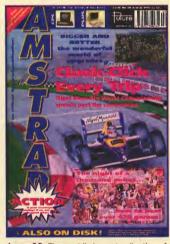

Issue 87: Inside - the complete history of Dizzy and review of the Amstrad NC100 notepad. And! Football Manager 3 reviewed. Full game of Nexor on the tape.

Issue 88; Two complete games on the tape - Tankbusters and Penguins. Inside, Videomaster, Robin Hood: Legend Quest and Crystal Kingdom Dizzy reviewed.

Issue 89; Inside - Buyers' Guide to disk drives, a look at CPC-stretching demos and Crazy Cars 3 reviewed. Plus! Wriggler and three great utilities on the covertage.

Issue 90; The world's hugest collection of Multiface pokes (more than 478 of them). On the tape: Steve Davis Snooker (full game) and LARA (m/code utility).

in the CPC world. Hacklt black box of tricks reviewed. On the tape: Tasword (word processor) and Colossus Chess 4.

FANZINE NEWS

Amstrad Fun

Issue Four of Amstrad Fun (Ireland's ONLY fanzine) should be out by the time you read this (unless of course you have just found this issue in your attic in the year 2067, in which case I should think the magazine has long since closed down) not only has a review of the brand new Zap 'T' Balls Advanced Edition but also exclusive previews of Super Cauldron and maybe even Prehistorik II, both programmed by EGS (funnily enough, the same team that brought us Zap 'T' Balls).

Changes are afoot for Alive & Kicking in time for issue three (which should be available by the time you read this). The main difference will be the move from twenty-eight A5 pages to no less than thirty-four A4 pages. Also, Lee Rouane has managed to snap up an interview with Gremlin Graphics not to mention the full map and solution

(along with a review) of Crystal Kingdom Dizzy. And for £1.25, it's a downright snip!

FRENCH IMPORTS... NUDGE, NUDGE, SAY NO MORE, ETC...

Derek Hyland of Amsof PD seems to have the monopoly on French PD these days. His library has now been topped up with another massive load of quality, machine code European software. Games, demos, utilities... Time for a short letter

FANZINE **REVIEWS**

CPC-USER

Editor: Steve Havward Price: Varies **MEMBERSHIP SECRETARY: 2 Wrenbeck** Drive, Otley, W. Yorks LS21 2BR

For anybody who hasn't already heard of it, CPC User is the official magazine of the United Amstrad User Group. In fact, UAUG is Britain's largest and (given the fact that it was launched in 1986) longest-running CPC group around.

Each issue has approximately thirty-two A4

Programming Mriting year own best-selling software is ea Chris explain... MHAI EXACTLY IS A COMPETED PROGRAMS Pasically, a computer program is a sequent a piane rell. If you think of one of the equivalent of a CPC, then the piane rell and the piane rell and the piane rell and the piane rell and the piane because the piane and the pian

Fanzam a go-go. This is the sort of thing you can expect from this new disc-zine. Not bad

pages, plenty of space for news, reviews and still a bit left over for a sprinkling of tutorials, features and program listings. Each month you can build up, step by step, a complete database system - time for those back-issues. What's more, all the really technical bits are explained in such a way that beginners can understand what is going on without boring the boffins to death.

Not all of the magazine with be of interest to everybody, but there is definitely enough to keep even the fussiest of CPC owners happy until the next issue is released.

CEF & FANZAM

Editors: Matt Hall and Jez Prices: 75p + 3" Disk

The Bungalow, Pershore Road, Pershore, Worcestershire, WR10 3EW

CEF & Fanzam is the co-production of two littleknown fanzine editors. Have you ever heard of either of them? THAT'S how little known they were. Not only does it come with well over 20,000 words of CPC stuff, but there's also one disk side for PD and Homebrew programs.

The main menu is loaded with a natty logo of both magazines down the left hand side, while on the right there are no less than twenty scintillating items to choose from (including games reviews, programming, CP/M and letters - all the usual fanzine stuff). The magazine clearly states that it is NOT a demozine, which means there is the extra boon of there being no rasters in the background, making the text difficult to read (something which many people find amazing for some strange reason).

LOOSE TALK

PRESTO NEWS DIES

After several months of being its being unavailable, Matt Gullam has finally decided to close Presto News and call it a day, thus putting paid to the plans for it to become a disc-zine under the name 'Grace Under Pressure' (inspired by a Rush album, trivia fans)

Matt said that the magazine was taking too much of his time when he should be running the library, and then, of course, there's his teacher training course.

Fans of Presto PD needn't worry, the library is still alive. In fact, several new additions have been made. Write to him at the address given in The Directory.

Alas, poor Preste. I knew it, Horatio; a fanzine of infinite jest, of most excellent fancy.

FANZAI

Not bad at all. It certainly didn't come from Title Screens R Us as so many of them do.

The software on the disk includes an brilliant version of Pipe Mania containing nine difficult levels of plumbing mayhem! 75p is a small price to pay for this game alone, the rest of the software and the magazine is a bonus!

In fact out of the very few British disk-zines available, this is by far and away the best one.

THE MAILBAG

Those letters keep on coming! To air your views related to the Public Domain scene, write them down, bung them in an envelope and send them to: Tim Blackbond (Public Image), Amstrad Action, 30 Monmouth Street, Bath BA1 2BW

A POTENTIAL NEW LIBRARY

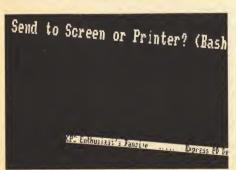

O: I am thinking of starting a PD library, I have a great deal of problems when I want to buy full price games as most of the shops I go to have stopped stocking Amstrad games. I can't be the only one with these problems so is it all right to sell full-price games games in my library? DARREN DODDS

NEWCASTLE-UPON-TYNE

You can't distribute commercial software in a PD library, not without getting arrested for software piracy.

COMMERCIAL BLUES

Reading your article in this months AA about commercial software, a sudden chill crept down my spine - I have a great deal of commercial games in my catalogue, all of which came from libraries like Scull (now Domain), Dartsma, etc and I was very worried that they may not be PD, and so who better to turn to but you? I have sent you a copy of GAMO7 and GAMO8 which contain · my commercial material, I would appreciate it if

Er... Well, this is a bit of the screen from Fanzam, really. What else is there to say?

SO WHAT ARE THOSE PRICES THEN?

UAUG runs by annual subscriptions, however sample copies can be obtained for the low price of £1.25. The membership rates go

New members: UK: £8.00 – Europe: £11.00 – Overseas:

Renewals: UK: £7.50 – Europe: £10.50 – Overseas: £14.75

you could assess them for 'PD-ness'. If you find them not to be PD. I feel you should warn PD buyers not to accept such programs from ANY library. I hope you can help me and other librarians in the same boat as me (Sounds like PD has contacted me and is concerned about the Glenco Software Sprites Alive demos).

SIMON WALKER PD FUN

I've looked through the discs, and YES! There are just a few programs that shouldn't really be there, namely Smiley vs. Grumpies, 3D Four In A Row and Anna Conda. These come from Computing With The Amstrad and even though this magazine is closed, Europress (the original publishers) can still kick up a lot of trouble about it. 3D Four In A Row was actually published only as a special program on one of the CwtA postal cover-cassettes.

As for the Glenco software, you needn't worry. These were made PD by Alan Scully who took time is checking out the full law surrounding them, and has even got Glenco's written permission.

WHAT'S IN A NAME?

O: I'm just writing to say that I am starting a fanzine called 'Syntax Error'. It will be about a range of subjects such as games, serious and public domain. I will send you a copy when it is finished.

DONNISON LAING

Stop! I suggest you re-think a name for your magazine as there's already a magazine using that title. It is produced in France, and is therefore all in French but it is still 'Syntax Error'. I think there is even a European demo coder with the pseudonym 'Syntax Error', so there'll be mass-confusion all round.

SOFTWARE REVIEW

PERPETUAL

By Robin Gilbert Pipeline Software: £4 9 Brynglas Terrace, Pyle, Bridgend, South Wales, CF33 6AG

Perpetual is a space shoot-em-up involving, erm... Blowing the living daylights out of a variety of aliens. Not high on the originality stakes, but

That all-important menu screen from the new disc-zine. It looks moderately groovy.

then what is these days?

The game is simple. Kill all the nasties and go to the next level. That's the winning formula that has provided millions of other shoot-'em-ups. There's also a shop where you can buy ship addons in order to cause even more devastation to the so called 'hostile' alien races.

In the first few games, the irritating unavoidable deaths quickly take your lives due to the speed of your ship and that of the aliens. Once you have the hang of it, it becomes a very enjoyable and challenging game, enough to keep the kids off the streets for quite a number of days.

Get Involved

Following on from the whole reader action 'thang' and our attempts to get you involved in the CPC scene, we've decided to extend the atmosphere as far as the PD world. So ...

If you've just started a PD library, write in and let us know. If you've written some software, send it along.

Fledgling libraries need a lot of publicity these days, and they can get this through the pages of Public Image.

At some point in the very near future, either as a part of Public Image or as a Reader Action subject, we'll be covering starting your own PD library, with the path to follow, pitfalls to avoid, and a few stories about the birth of established libraries. So if you've got an angle on this topic you think we should cover, write to:

Reader Action Amstrad Action 30 Monmouth Street Bath **BA1 2BW**

Do it now

ROMBO **DISCOUNTS**

ROMBO ROMBOARD Now only £25.00

The most widely used of all Romboards sockets; on/off switch for each; high 8 or low 8 ROM slots selectable; facility for a ZIF socket or 16k RAMROM.

DISCOUNTS

20% - with the Dual-Mode Drive 10% - with ROM software valued at £20 or more.

EPROM PROGRAMMER with ejector socket - £30 with ZIF socket - £35

ograms 8k and 16k, 12.5v and 21 eproms; full eprom, part eprom and single byte programming; rom file editing. Supplied with easy to use menu driven Software, PD games rom file, utilities to turn Basic and machine.

32k RAMROM - £14.95

32k of RAM in two 16k blocks. Each behaves like a ROM, surviving resets, when loaded with ROM software. Ideal for testing ROM programs without the need to blow erase eproms.

ROMBO VIDEO DIGITISER

Now only £65.00 Captures video pictures from a video record

camera or TV with 'video out' to computer memory. Manipulate pictures, save to disc, us in programs, print out, etc.

AVATAR

MS800 is the number one high capacity formatter, allowing up to 800k storage per 3.5" disc. It is the ONLY one that doesn't need to be present for its discs to be used, the ONLY one that is compatible with all software including CPM, the ONLY one that uses no memory whatsoever, the ONLY one that can use its discs in drive A (ABBA switch users, please note), the ONLY one that works with the Plus machines. It is supplied with its own copying utility and a menu program that allows many tape to disc transferred games to run from drive B. Check these features against any alteractives and you!! see why MSRO0 is simply the best ROMONOFF SWITCH - £7.95 y alternative and you'll see why MS800 is simply the best. nnects to the expansion port to turn all ernal ROMs OFF or ON as needed. Not able for a 464 with disc drive.

....9.95 ...14.95 MS800 disc or ROM. ASBOO disc and ROM

Pound for pound the best value ground

Now includes 22DISK - the No. 1 CPC/PC/CPC file transfer program.

Also includes:-

* MS800 on disc * MS800 on ROM

* 10 blank discs * carriage

Our superior drives do everything that all other 3.5" drives do - and more besides!

AODE 2: Full, unimpeded use with Rodos, Ramdos, Romdos and

MODE 2: Full, unimpeted use with Rodos, Ramdos, Romdos and Romdos XI, giving up to 800k per dise without the need to use the SIDE SWITCH. The statement elsewhere that "other drives... will only allow you to access 400k at a time" is a lie as many who have resorted to adding their own side switch to inferior drives can confirm. Full use of MS800, the no.1 high capacity formatter - 800k per disc at 400k per side. MODE 1: works as a complete alternative to the FD1 B drive - 180k per side. Without the side switch, mode 1 is not possible.

OVERALL: Ultra quiet mechanism, the type used in most professional computers; super small; separate power supply; sleek metal case. You need to buy nothing else to use your drive immediately. MS800 is supplied on disc and ROM whether or not you have a Romboard - see the ROMBO DISCOUNTS.

464 PLUS 1st drive - see this ad.

Directory Editor

By John Tompson

Setting the filestatus of a directory can be a bally irritating task. Unless of course, you have a decent Directory Editor, which is what this program is. It allows files to be undeleted.

hidden, set to read only and renamed All with full screen instructions.

Pilltris

By James Bland

Have you seen Dr Mario? Well, if you haven't you are about to see a pretty close version of the game. The idea is much like that of Tetris -Small two-colour pills fall from the top of the screen and before they land you must manoeuvre them to land on matching colours. It's all very complex, but great fun!

Meteorite

From Hawk PD

It's the usual story: Flying around in deep space looking for nothing in particular when all of a sudden the red 'Meteor Alert' light flashes and you're in the thick of a barrage of rocks. Use the joystick to aim the sight and then, surprisingly, fire to fire the lasers. Look out for the lasers overheating...

And that, as they say, is that. There'll be more next month, so get typing or you'll never be finished in time for the next lot.

A Brief Word In Your Ear...

Please send your type-ins to:

Type Ins **Amstrad Action 30 Monmouth Street** Bath BA1 2BW

To increase your chances of seeing your own work in our pages, you'd do as well to bear the following points in mind:

1 Make sure it's your own work. Our knowledge of published CPC software isn't exactly encyclopedic, so we don't often spot things as being ripped from a magazine or PD library. If we do recognize them we just wipe the disc and use it for our own stuff. And in the end you just make yourself look a twit because if we don't spot it then someone else certainly will. And then everyone gets cross with you. 2 Make sure the program works. We get

have time to debug them. If the program doesn't work the first time we try it, we wipe the disc and use it for something else. It's your money you're wasting.

3 Keep them short. People moan enough about having to type the things in (now that we don't put them on the covertage any more. We reckon about 200 lines is the upper limit, really If you have anything longer than that, we might consider it, but we can't promise to use it unless it's something people just aren't going to be able to live without.

4 Keep them original. Over the last 90-odd issues we've lost count of the number of Pacman clones and Biorhythm Generators we've had to look at. Yours might be the best programmed version of some tired old classic but very few people will be impressed if, in the end, it's just a tired old classic.

5 Finally, please send them in on tape or disc mountains of type-ins every month and we don't — a printout just doesn't cut the mustard, sadly

For Sale

DISK GAMES will swap for games from massive collection. Also wanted 3.5" disk drive, will swop for up to 10 disk games.

drive, will swop for up to 10 disk games. Tel Ben on 0440 706231.

BARBARIAN, will swap Skull N Crossbones or Super hang On. Will pay cash up to £5. Write to me please, I'm desperate. Philip Healy, Ahalana, Moyvane, Co.Kerry, Ireland, Tel 068 49114.

OPARADES 6128 PLUS - TAPE UPGRADE

You've been waiting patiently for ages, and now it's here. In the final part of our upgrades series, Phil Craven shows you how to fit a tape connector to your 6128 Plus.

For some peculiar reason Amstrad, in their not so infinite wisdom, contrived to produce the excellent 6128 Plus computer complete with everything needed to access a tape recorder except a connector. Well, almost everything. The software is inside the system cartridge. You can see it by typing ITAPE[ret] followed by CAT[ret] or RUN""[ret]. The tracks and holes for the tape components are already on the circuit board and all that's missing is a transistor, a resistor, and. of course, that connector. The additional cost of including them would have been so tiny and their function so useful that no one can fathom why they were left out. But that's Amstrad, I guess.

Anyway, we can put it right by adding the tape of more than £25 over one available tape is incredibly easy and results in a neat 5 pin DIN tape socket mounted in the back of the computer. The ability of the computer to start and stop the tape recorder is included - that's the infamous 'remote' facility that some tape

facility for a mere £10 which is a massive saving upgrade and £8 over Avatar's diy kit. Installing it

May 1993 AND TO ACTION

the £10 are a tape recorder and a lead to connect it to the DIN socket.

Cheap and nasty tape recorders, with the volume turned up high, are best for computer use. Data recorders are useless for music and voice but are ideal for computers.

won't do. The only items that aren't included in

Once again Avatar, 39 Crossfell Road, Leverstock Green, Hemel Hempstead, Herts, HP3 8RG are this month's suppliers for the full kit of parts which includes everything needed to do the upgrade except a tape recorder and cable. Why the big price difference between the kit for this project and Avatar's normal kit? Simply that their normal kit isn't really a kit at all but is supplied as an assembly with most of the work

Are you sitting comfortably?

When handling the circuit board try to avoid touching any of the circuitry. In the old days some types of chips could be zapped by the body's static electricity and, although this is less likely now, it's better to err on the side of caution so, before opening up the computer, hold the cold water tap for a second or so to discharge any static.

Open the box one more

Disconnect the computer from the monitor and remove the cartridge. Turn it over and take out the six screws from the underside. While it is upside down, notice the three catches that hold the case top to the case bottom. Turn the computer the right way up again and undo those catches by pulling them outwards.

Undo the wires

Lift the top up and back and disconnect the two pairs of wires that join the case top to the circuit board. Take note of their colour codes so that. when finished, you re-connect the correct pair of wires to the correct circuit board connector. Slip the keyboard's slide-in film connectors out of

> their sockets and remove the keyboard. Disconnect the 4 way power socket and 26 way signal cable from the disc drive - not from the circuit board. Take out the three screws that hold the circuit board to the

base and lift the circuit board out altogether.

Look and learn

Fig.1 shows the positions of where resistor R4. transistor 001 and connector CP07 would have been if Amstrad had fitted them. They are clearly marked on the circuit board but their holes are filled with solder. It's your job to clear the holes and fit the parts.

Suck 'em and see

A solder sucker costs about £3 -£4 from Tandys or Maplins but it seems a shame to buy one just for 13 holes so, if you haven't already got one, or if you can't borrow one, you could try working the parts into the holes by using a soldering iron to melt the solder in each hole, one at a time, and easing the parts in bit by bit.

The resistor and transistor shouldn't be too difficult but the 8 pin header strip (set of pins) might be not be so easy. Only five of the pins are actually needed so pulling the other three out with a pair of pliers will help. Failing that, a solder sucker is the thing to get.

Soldering on

Solder the resistor, R4, transistor, Q01 and the 8 pin header strip into place. The resistor can be fitted any way round as can the header strip but the transistor's flat side must be positioned to match the white, flat sided, transistor shape printed on the circuit board. When those three parts are fitted, the circuit board can be screwed back onto the case bottom, the disc drive connectors re-connected, the keyboard put back and its film connectors re-connected. The copper leaf springs should rest on the underside of the keyboard. If they've been bent down, bend them back up again.

The cable assembly

This comprises a 5 pin DIN socket, a relay with diode for the remote facility, a foot or so of 5 way multicoloured ribbon cable leading into an 8 way terminal housing to push onto the 8 way header strip now fitted

It can be made with the relay and diode in any position along the cable but Avatar's arrangement is ideal and keeps any metal parts from touching anything where short circuits might occur so that's the arrangement we'll use. The more I say, the more it seems there's no end to my pinching of other people's ideas so, before the complaints start, I'd better own up. Most of the CPC's hardware add-ons, including the upgrade kits, are owned and made by me and I'm simply sharing with you what's already mine.

Sounds very tinny

With a Stanley knife or similar, cut between and separate each strand of the ribbon cable to about 1.5" to 2" at both ends. Strip away about 0.25" of insulation and tin each of the 10 ends. Tinning is melting solder over the bare wire by holding the wire onto the soldering iron tip and putting solder onto it. It coats the wire with solder to make more reliable soldered joints but it isn't necessary for components like those you've already fitted.

I'm afraid it's terminal

Solder a terminal onto each of the five strands at one end of the cable by melting solder into the solder end of each terminal and then melting it again whilst a tinned strand is held in it. You'll need a spare hand to hold each terminal for that job so how about making some imaginative use of a bit of sticky tape? Stick the terminals' nonsolder ends to the tape to prevent them from moving. The terminals will later push into the white terminal housing but not yet.

Relay racing

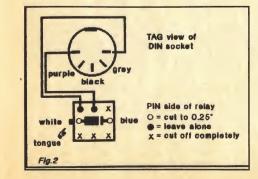

Prepare the relay (silver cube thing) by cutting off the unwanted pins and shortening the two pins where the diode is to be soldered down to about 0.25". The relay has a small tongue along one side which must be used to identify which pins to cut off, which to shorten and which to keep anyway. Fig.2 shows exactly which pins to cut

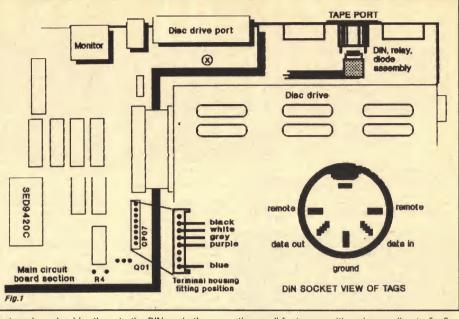

You should be left with two long pins and two short ones (one of them next to the tongue and the other opposite it). Bend the diode's two wires at right angles to the diode's body and cut them back to about 0.25"

A small vice would help with this next bit. With the relay held securely, pins pointing up, solder the diodes wires to the relay's two shorter pins making sure that the diode's wires don't end up touching the relay's surface. The diode gets hot during this and is best held with pliers. For neatness, you can bend the wires in and the pins out so that they are parallel to each other. You can also bend the two long pins out of the way.

It is very important that the diode is soldered the right way round. It has a white ring at one end which must be soldered to the pin that is opposite the relay's tongue and not the pin that is next to the tongue. Fig. 2 shows how it

The relay can now be connected to the DIN socket by its long pins. Run some solder over the DIN socket's five main tags. Cut about 0.25" off each of the relay's two long pins, splay them

outwards and solder them to the DIN socket's tags as shown in fig.4. It doesn't matter which pin goes to which of the two tags as long as one pin goes to each of the two tags shown. Personally. I do it so that the diode, which now faces the DIN socket, sits neatly inside the semicircle of tags but then I fill the gaps with hot glue to ensure that the pins don't touch any tags. You might find it better to position the diode outside the semi-circle of tags. Wether inside or outside the tags, you should note that a hole, the size of the DIN socket's barrel has to be drilled in the case top and the whole assembly pushed through it so keep the overall circumference inside the barrel size. The gap between the DIN socket's black base and the relay's base should be about 0.5" to keep it from touching the disc drive when fitted.

Are we nearly there?

We're nearly there. Just the cable to solder up. Solder the cable's coloured strands, the ends without the terminals, to the relay/diode and DIN tags as shown in fig.2. It isn't important which colour strand is soldered to which tag or end of diode as long as the terminals are inserted into the correct positions in the white housing. To be safe, though, stick to the colours as shown.

All together now

Three holes for the DIN socket's barrel and two bolts need to be drilled into the computer's case top. Fig.1 shows a good place to do it. Push the cable assembly through the large hole and bolt the DIN socket into place. Now the terminals can be pushed into the housing. See fig.1 for the correct positions with respect to the housing's two small feet. Each terminal has a small leaf spring on one side and the housing has a set of small windows. Push the terminals in so that the leaf springs pop into the windows. If you manage to put a terminal into the wrong place, push down inside the window with a screwdriver, to release the spring catch, and pull it out.

You can now re-connect the two pairs of wires from the case top to the circuit board, push the new tape connector onto CP07, making sure that

the small feet are positioned according to fig.6 and completely put the computer back together.

Using tape

Note that fig.1 shows the signals that are connected to the DIN socket as seen from the tag side and not from the more usual holes side. A suitable cable for your particular recorder can be obtained from that information.

You computer will still power up with the disc drive as default. ITAPE changes the default to tape until you type IDISC or reset the computer. I is obtained by typing SHIFT and @ simultaneously. Having typed ITAPE, any program you wish to run will be met with the on-screen message, Press play and any key... Pressing play on the tape recorder should not start the tape turning because the computer is in control of its motor. After pressing any key the computer starts the tape's motor and stops it again when the program has loaded.

The main purpose for having a tape facility on a disc drive computer is to save money by buying tape software and transferring it to disc. The problem with most such software, particularly games, is that they are protected against copying and a tape to disc transfer utility is usually needed. Both software and hardware types are available from advertisers in this issue but it is beyond the scope of this project to discuss them further.

Problems

As with the previous projects in this series, where we have shown you how to modify the computer itself, there is day and evening technical help available on 0274 602180.

If the upgrade is done according to the instructions in this article, then it will work. However, we have no control over what a person might do inside his/her computer so neither Future Publishing Ltd, nor the author of this article can accept any responsibility or liability for any damage that might occur by doing this project.

BULLY'S SPORTING DARTS

Page 44

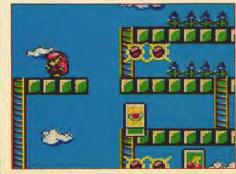

BART VS THE SPACE MUTANTS

4 MOST SPORTS

Page 46

RODLAND

Hoping to meet

interrupts the

game and fails

six darts, Tim

Norris approaches the oche.

There are tons of darts games and this is one of

features everyone's favourite bovine sportsman,

them. Will that do? No. thought not. The

attraction of this particular variant is that it

Bully. Dear old Bully, as you must surely be

the Sunday afternoon quiz, Bullseye (lovely-

aware, is the fat ugly animated creature that

interrupts Jim Bowen from time to time during

smashing-super-we've-had-a-lovely-day-Jim-let's-

have-a-look-at-what-you-could-have-won). Sadly,

the game has no connection whatsoever with the

to score 301 with

that fat bloke who

00 000 Get ready indeed, for the most utterly

bizarre game of tennis you've ever seen.

TV show other than in that it stars Bully. Jim doesn't appear at all. Still, never mind, eh?

Once you've selected your preferred variation of the game, Bully's hand appears on the screen and begins to bob improbably about the place. You use keys or joystick to control its up, down, left and right bobbings, and then launch your arrow (pronounced 'arra') towards the board. It's very tricky and quite amusing.

Ah, yes, but if that was all there was to it there wouldn't be much of a game for your four quid. A couple of games of 501 (a platform game where you have to buy some expensive jeans - no, just kidding) and you'd switch it off and go and cut the grass or something. That's why there's a whole load of other dart-based games thrown in as well.

You can play football, golf, snooker, tennis, cricket, and the traditional clock darts. Lawks a lordy. In fact, they're all just target games (they would be, wouldn't they?) but they do add a little extra fun to the whole thing, especially if you

Football was my favourite but they're all fairly bizarre and (mostly) entertaining. I didn't understand what golf was all about and cricket bored me stupid (quite a good representation of the real thing, then) and that made them the weakest of the games.

Over all, then, this is much more fun than I'd expected it to be. We wasted many a happy hour

Alternative £3.99 # 0977 797777

Go on, just chuck it at the five. What do you mean, it keeps bobbing about improbably?

in the AA office playing darts instead of working and I can heartily recommend it for a bit of light and fluffy fun. Shame you don't win a speedboat at the end, though.

VERDICT

GRAPHICS

SONICS

Bleep.

A dart board and a hand. It does the job but it won't blow your mind.

GRAB FACTOR Monstrously entertaining. The whole idea is very amusing.

STAYING POWER You'll fetch it out occasionally when your mates come round, but it's not much of a stayer, really.

Lovely, smashing, super, let's have a look at what you could have won.

The Space Mutant We decided to let our resident under-achiever. Tim

Norris, have a look at this

one. It seemed appropriate.

The Simpsons, as you must be aware, were something of a phenomenon a couple of years ago. Their fame grew from the appearance of a few short cartoons in the middle of Tracy Ullman's American TV show. Before anyone could stop them they were starring in their own prime time series and kids the world over were inviting each other to 'eat my shorts'. proclaiming themselves to be an 'under-achiever and proud of it' and advising their parents not to have a cow, man.

In this country they're still on satellite TV (and a million and one discarded key-rings) but it seems they're something of a spent force vesterdays news. Loads of people still think they're funny (I do, for one), but they're not the craze they once were. So it's against this

You'll believe a small unpleasantly yellow boy can fly. If only there were more to it...

Why not pop in the toy shop and buy some fun stuff? It might come in useful later.

background of fading glory that the Hit Squad have re-released Bart vs The Space Mutants.

The Simpsons ws

So anyway, let's start with the plot. There always seems to be a plot, doesn't there? In a lot of cases the plot is just plain silly - like in the shoot-'em-ups where some evil space creatures have decided to steal the Diamond Moon of Zak and your mission, as Space Cadet Billy-Bob McTucket is to... blah, blah, and all you need to know is that if it's moving, you should kill it.

In Space Mutants, the plot is bizarre, but necessary (sort of). You have to understand, you see, that the Space Mutants have invaded the Earth and are collecting various objects with a view to creating the Ultimate Weapon. All young Bart has to do is to stop them.

It's important to know that otherwise you wouldn't understand that, in level one, for instance, you need to get rid of all the purple objects you find. Evidently the mutants need purple things for their weapon. I have to say that I thought this was a particularly amusing idea. On later levels the mutants are after different things (balloons, exit signs - you know, regular 'ultimate weapon' stuff) and this bizarrely surreal humour adds quite a bit to the game.

This is a Good Thing. The sad truth, you see, is that there's precious little game in there to be added to. It's essentially a collect-stuff-and-use-it-Each screen contains a couple of obstacles and while you get the chance to use some of the ull you picked up or bought. There's nothing

Not everyone's been taken over by the mutants. Your x-ray specs tell you who

The Hit Squad **2** 061-832 6633 **2** £3.99

Don't have a cow, man. Bart's back, and this time he's got a can of spray paint (?)

And then there's poor old Bart who looks nothing like the real Bart Simpson. (Bart's not real. Tim. he's a cartoon character. - The Team) Maybe it's just the limitations of the CPC. Yes, that must be it.

It's nothing to write home about, that's for sure. If you don't own any other arcade adventures and you guite like the idea of being Bart for a bit, then you might want to take a look. But overall, Simpsons fans and game fans will probably be a bit disappointed.

GRAPHICS

Not bad, but Bart looks nothing like the real Bart. Big sprites are a hassle, but might have saved it.

SOMMES

Not too shabby. The effects are pretty together and the whole thing works quite well.

GRAB FACTOR

Unless you're absolutely determined to have a good time. you probably won't be grabbed.

STAYING POWER

Although, surprisingly, if you do stick with it you'll probably keep coming back for a little bit more.

Not, if you're honest, a bad game, just not a particularly good one, either.

May 1993 AMSTRAD ACTION

Alternative ■ 0977 797777 ■ £3.99

We thought Simon Forrester was in need of some sporting activity so we let him loose on this compilation...

Kentucky Racing

Roll up, roll up! Ladiiies aaand gentlemen, this is a computer simulation of a fairground game! Yes, kiddies, yawn! Sigh! Fall off your chair! Throw balls up a slanted piece of wood, and watch powerful horses galvanise themselves into a slow trot. Fun. huh?

I'm, sorry. But I mean really... The Kentucky Race was a fairground game that travelled around the southern states of the USA. It was not a sport. The idea was to roll a ball along a piece of wood, aiming for certain holes. The further away the holes, the farther your horse went. More sophisticated models actually had some automatic horses moving (the earlier models employed short people in fancy dress or something). Wow. Fab. Lets make a computer game about it!

You, the brave and skilled athlete, master of your profession, pinnacle of horse riding fitness,

It couldn't be more fun. No, it could really.

Oh no, the computer has taken the lead.

May 1993 AMSTRAD ACTION

It is, indeed, a very bizarre development.

get to control the throbbing mass of muscle and sinew, one four-legged running machine, by throwing a ball into a hole. This is more than a little worrying.

That's the concept done with. So the game? Er, yeah. The graphics are nice and colourful, if a little garish in places (most places), but they do the trick. Sonics aren't exactly the height of 'bearable' either — with a version of 'The Camptown Races' that should make even the most mindless Rave fan collapse. Gameplay-wise, this game isn't winning any prizes either. It's got one 'skill' to master, and that's just how to get a hand to throw a ball. Hitting the holes is quite, quite random, you see.

You'll also need a little patience to play this game. Horses limping across your screen is one thing, but being forced to hear garish tunes before you're even allowed to play is pushing it a little far.

Sorry, but it'd be hard to justify this offering as a sports game, and even harder to justify a reasonable mark for it. If it's a horsey game then it's not very good, and if it's a throwing-the-ball-into-the-hole game, then it's got an awful concept anyway.

Rating - 25%

You've lost. And it only took six hours.

Oh no, it's a dodgy-looking geezer in a hat.

Championship Sprint

Remember all those sprint games? With the top-down view of a little track, and lots of little rectangular cars whizzing round? Fun, huh? The basic idea is four cars, two of which can be human players, have to burn round a track, and, obviously, try to win. There are a nice variety of tracks to try, with speed corners, bridges and such, and various power-ups to collect.

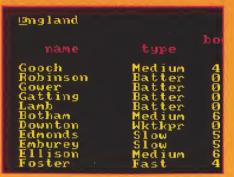

There are also quite a few problems with those little things in life. Like the other cars. You know, the ones with better acceleration than your car, better grip than your car, and a completely

Someone there's looking the wrong way.

Choose either of these uncontrollable cars.

Stats and more stats. And there are stats too.

pre-defined route that lets them bomb round the track without crashing once. Fun, huh?
Remember BMX simulator? With the opponent rider who was hell on wheels? At least with Championship Sprint they don't ride straight through you. You're effectively racing ghost cars round the track. So forget any cunning crash tactics, they don't care – they just sail on through the middle of you.

So you're up against some pretty stiff competition. The other thing that counts against you slightly is the fact that your car seems to be covered in glue. Yes, boys and girls, glue. You see, when you crash into a barrier, you don't bounce off. You don't scrape down it, and you don't die. You just stop. And you can't start again. You seem to stick to this barrier, so you have to very slowly inch your car out of the way, then rocket off ready to smash into something else. I would have felt much better if I'd have seen some of the other vehicles crash, but I didn't. They just burn by, laughing. Because if you get behind just once, they'll have lapped you before you can blink and shout 'This is crap!'.

There are some power-ups, such as point bonuses, car repair thingies, and such, but apart from that, it's just a very simple racing game, dating from the *Super Sprint* series, which also lacked content. *Championship Sprint*, however, lacks content and quality.

Graphically, you won't have any problems, as it does look reasonable, but the total lack of all gameplay turned me cold. Be warned though – when you start playing, don't expect to be grabbed. Staying power is a joke as well, by the way. If you keep it loaded for anything over 5 minutes, have pity on me, 'cos I had to play it for a lot longer than that.

Rating – 30%

Cricket International

Hold on a minute! I'm a seasoned CPCer! I've

This is a diagram of your lower intestine.

The bowler runs like Bod. Where's Aunt Flo?

seen this somewhere before! Oh yes, that's it! It's *Tim Loves Cricket* from Peaksoft. If you don't remember it, don't worry, it was probably a bit before your time (Argh! I must be getting old to write something like that!) Anyhow, witness probably one of the strangest cricket games in existence, in which it's not only the bat and stumps that are made of wood.

So, you start the game by looking at thousands (well, it seems like thousands) of statistics tables of the various players, and their various bits and bobs. This could probably be all very interesting to hardened cricket fanatics, but to the average game-reviewer in the street, it is just a little tiresome.

But in due time, the action begins. And what action it is. This sort of LegoTM man (not the shop-window-display quality stuff, but the six-year-old stuff) shuffles left and right, finally clicking (and I mean clicking) forward and throwing the ball.

Said ball then flies up the pitch. When the ball gets to the batsman, you (if you're batting) get to attempt to hit it. Well, block it. It's very rare you'll manage to crack it straight back through the bowlers head, but you might get it a fair way.

Cut to pitch. The ball flies off, while the computer's fielders (represented by UDG men – ugh!) run after it. You can then control your running batsmen using up and down joystick waggles.

All very fun. Now the computer is in bat. You shuffle the bowler. Press fire. He throws the ball straight. None of the fancy trick shots (or is that snooker?) that the computer manages, just this dead lump of string flying through the air. The CPC's batsman then performs some lovely acrobatic moves, and cracks the ball for a six. Your only hope now is the excellent fielding team!

So this ball's flying through the air at the speed of sense. One of the fielders is flashing. (*Careful. – Ed*) To select which fielder you're

Don't be silly, that's not Alan Border.

Don't be silly, that's... oh, we've done that.

using, you press COPY. Each fielder flashes in turn. (Oh, I get it now. – Ed) Slowly. By the time you've managed to select a fielder anywhere near the ball, it's hit the boundary, the game has finished, and the computer team is inside eating cheese and cucumber sandwiches.

So, for a game that has a variety of different matches, and a nice way of setting up customized teams, it could so easily have been brilliant. It is brilliant, except for one tiny flaw – it's ludicrously crap. Maybe that's a bit harsh – surprisingly crap. Sorry Alternative, I'll send a wreath.

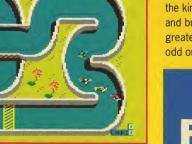

Rating 20%

US Basket Master

At the time of writing, *US Basket Master* was not available for review. This, unfortunately, is the luck of the draw sometimes. We'll probably review *USBM* separately in a future issue, but until then, I'm afraid you'll have to wait.

And finally, Esther...

So, this has been a bit of a non-starter of a sporting compilation, hasn't it? It's hard to say what exactly will have gone wrong. The problem so far seems to have been the run of weak titles – one completely naff game, one moderately bad conversion, and one title so old it was released first on gramophone record. Apologies to Alternative, but I really can't give this compilation the kind of mark that's going to make you go out and buy it – even if *USBM* turns out to be the greatest game ever. You might actually enjoy the odd one or two of these, but not for long.

No, I tell a lie, it's Championship Sprint.

Balance on this balloon if you like, but the cute fox (which you must kill) is down there.

As far as we can make out, these cute things are furry space-hoppers. Who cares, Kill 'em.

Lots and lots to see, do and collect. But what's this? There's nothing left to kill

Kixx ■ 021 356 3388 ■ Cassette ■ £3.99

Simon Forrester goes cute bashing, and loves it...

In the beginning, there was cute. Then, as the mountains of fluffy pink things started to erupt, DJ Puff was slammed for being a little too cuddly. So what happens when AA towers are hit by a blimp of fur? Do we evacuate? No. We sit down and review the blimp - Rodland. (Is it me or was all that ever-so-slightly surreal? - Ed)

So, there's these two pixies, called Tam and Rit, who's 'Mom' has been taken prisoner by some villainous thing. Anyway... These two fluffy things (I envy that hair) journey through the vast and treacherous Rodland, killing fluffy things.

Enter screen one with Tam and Rit standing in wait. A cute furry space hopper sidles up. The seemingly passive Tam grabs it and flings it over

For some ineffable reason, all this killing of cute furry things never seems to get boring.

You don't just kill things, you swing them repeadedly over your head until they explode.

suddenly turned into a furry massacre, and that's the whole point of the game. It's a platform fur frenzy. Okay then... There's a fun range of things to nobble, from furry lumps, sharks and lobsters, to clouds. There's also an impressive range of Cybernoidstyle ways to kill them with the weapons left

his head. Thing hits the floor - poor thing. Tam

hasn't let go. Instead, he's thrown him the other

way. And back. Thing dies. This fairy tale has

behind when Tam or Rit kill something. First, there's the standard missiles that fire when you touch them, obliterating so many cuddly toys on their way. There's bouncing bombs, that move round the screen and usually manage to take out most of the bad guys, and there's dynamite, which sends a horizontal blast in both directions, killing lots of poor, unsuspecting (but incredibly violent) balls of fluff.

The fun doesn't stop there though. Tam and Rit can build ladders, allowing them to get to unaccessable platforms, jump through doors (kind of like a teleport), float on balloons, and do all kinds of wonderfully cute things that'll aid him in the relentless slaughter of more things. A few points bonuses (as bounty on the critters' heads), and that's all there is to it as far as concept, gameplay and everything else is concerned.

Graphically, Rodland is pleasing. The graphics are all well animated, with loads of different creatures, each of which has its own movements, characteristics, and speed. The game is complemented with a variety of backdrops, with sky, clouds, and the odd wall.

The sounds are all quite cute as well. There's a garish little title tune that'll make you quickly reach for the volume control, but once you get into the game, the sound effects are used sparingly and effectively, with a fairly terrifying skull crunching sound to complement the brutal abuse of the cuties.

Gameplay is excellent. What more can I say? You're running round, splatting everything in sight, and it feels great. You've been provided with a whole arsenal of anti-cute weaponry, all of which you can use with the greatest of ease.

There are still a few niggles you'll have, though. Every now and again, you'll get swamped with fur, and somewhere inside that lot, you'll be dying. It's also impossible to pick up half of your bonuses, as you only get about two seconds after all the fluffies are dead to collect them.

If you thought DJ Puff, or maybe even Seymour was cute, you must see Rodland. Normally I hate cute-em-ups, but this goes beyond that. It's two-year-old-with-clocolate-roundthe-mouth cute. You expect Tam to give the bad guys a nasty pinch rather that cave their heads. Got the idea yet? CUTE, OKAY? Altogether, it's a worthy title. The levels multiload, but won't take that long and are worth the wait, so if you haven't already got it, go out and get it.

GRAPHICS

Carefully detailed and beautifully animated sprites, and tasteful backgrounds really add to the

FULLY COMPATIBLE SEGA MEGA DRIVE CARTRIDGE SLOT

Silica Systems are pleased to offer an exciting new upgrade, the Amstrad 486 SLC 33MHz 'Mega Plus' PC, which uses the revolutionary 486sLC 33MHz CPU, manufactured by Texas Instruments and Jointly developed with Cyrix. This chip is a 33MHz 486 instruction set compatible micro processor with a 32-bit internal data path and power management features. It achieves a new level of processing performance by utilising a single cycle pipelined execution unit, a hardware multiplier, optimised five stage internal pipeline and a tightly coupled 1K internal cache. The hardware multiplier enables integer multiplication up to 8 times faster than the shift - add multiply function used in other 486 CPUs. Which computer(s), if any, do you own?..

I'm so Dizzy, my head is spinning. Phil Howard's been collecting loads of Dizzy solutions just for you.

Colin Mullholland of Belfast is first up with his tips for the second adventure (are you still there Colin?).

TREASURE ISLAND DIZZY

- Use the empty chest as a stepping stone to get over the hill on the right-hand side of the beach.
- Wear the rubber snorkel when swimming.
- Drop the Sinclair mag in the water near the

coin on the beach.

- Use the sticks of dynamite to clear the rocks that block your path in the mine.
- Use the infrared detonators with the dynamite.
- Use the glass sword in the graveyard to open the entrance to the smugglers cave.
- Wear the snorkel.
- Exchange the bag of gold with the shopkeeper for the motor boat.
- Exchange the small video camera with the shopkeeper for the dehydrated boat.
- Exchange the cursed treasure with the shopkeeper for the ignition key.
- Exchange the microwave with the shopkeeper for the gallon of petrol (for the boat).

- Drop salt water spade on moving rock underwater. Jump on bubbles to get to the other side of the island.
- Drop the woodcutter's axe in the centre of the bridge to get to the caves below.
- Use the holy bible to stop you getting hit by lightning when holding the cursed treasure.
- Give the empty bucket to the shopkeeper.
- Take the large golden key to the smugglers cave and drop it on the half sunken barrier to gain access to the old kitchen.
- Drop the dehydrated boat in the water at the end of the quay and the boat will appear.
- Drop the outboard motor in the same place as the boat and the boat will change colour.

If we live to be as old as Rod, we'll none of us ever understand the appeal of Dizzy.

And here comes James Clarke of Cramlington with the solution to another.

- Go left into the village.
- Collect the grease gun and go left to the mine.
- Drop the grease gun next to the cart.
- Enter the mine and go right and get the
- Go left then down.
- Kill the ghost by falling on top of it.
- Go right and down and collect the purse
- Get out of the mine and go back to where
- Go right to the old tree house.
- Stand on cup and get gold.
- Get to the top of the tree house and jump up.
- Collect the cloud silver lining and go to the
- Drop the silver lining in the cauldron.
- Go right and collect the burning torch.
- Stand next to the cauldron and drop

the torch

- Go above the mine and collect the Acme bird seed.
- Make your way to Dizzy's End killing the birds on the way.
- Drop the seed, go back to the mine and get the key.
- Go to Dizzv's End.
- Dodge the raindrops and open the door.
- Get the birdseed and go right twice killing the birds.
- Get the Vampire Dux feather and go to the start
- Drop the feather into the cauldron.
- Go to the place where the ghost was in the mine then right three times.
- To get past the little river jump straight up in
- Go to Dizzy's End then through the graveyard to the drawbridge.
- Drop the oil and go across the drawbridge.
- Use the insecticide to kill spiders.
- Go up the stairs and right to collect the troll brew then back to the start.
- Drop the brew into the cauldron.
- Go right five times and climb the tree.
- Collect the spade and climb back down.
- Go left stand in the middle of the screen and drop the spade.
- Fall down the hole.
- Work your way to the trowel.
- Drop it on the springy mushroom under
- Stay in the caves and go right twice to get

- key was
 - Go right twice. Drop the cutters on the chain.

 - Go back to the start and drop it in the cauldron.
 - Go to Zak's castle and collect the broken heart.
 - Go down the hole again and get the diamond.

 - Drop the diamond on the thin ice above the
 - Go to where you smashed the ice and

 - when it has hardened.

 - Go back to Zak.

 - Go back to the collapsible bridge.
 - Collect the notion.
 - Drop it on the cauldron and pick it
 - Go to Zak and drop

- Exit the caves and go to the mine where the
- Make your way to the leprechaun's wig.
- Go to the screen left of the drawbridge and give the woman the heart.
- Go to the start the left five times.
- Go left and up and get the bottle of dry Ice.
- Go left to the red box.
- Drop the dry ice and walk across the water
- Go left and down the hole to get the amulet.
- Let two bolts hit you then drop the amulet.

- the bottle near him The game is
- That was

- Go left and talk to Dylan the bush.
- Go left and Jump over the well.
- Walk onto the shark, keep going on the fin till you get to the other side.
- Collect the empty milk bottle.
- Drop the back door key and the empty milk bottle.
- Go left and collect the handle.
- Exit top right via the stairs and walk left.
- Keep going left and jump over the gold cross,
- exit left. Walk to the stairs, jump left twice and then
- jump right. Walk right all the way, jump left and collect the power pill.
- Make your way back to the gold cross, but don't pick it up.
- Exit right, walk right, jump over the bottom
- right exit. Walk to the pillow on the bed and jump right.
- Wait for the bat to start flying to the right. Jump right, and walk right falling through
- the cloud. Walk to the right of the well roof, jump right
- and then left Collect the cloth duster (be quick you fall through the clouds).
- You will land on the well roof, walk right to get
- Jump left over the well entrance.
- Drop the handle where you land and collect the empty bucket.
- Drop the cloth duster.
- Go right and keep going till you get

- to Weirdhenge.
- Go to the right hand column, make sure you have the power pill.
- Place Dizzy on the left hand side and jump right, you should have killed a ghost.
- You should also have landed on a boulder so walk right, then left, at the right hand side of the boulder jump right.
- Jump right again and you will kill the other ghost.
- Collect Dore the frog (free her in the throne room by getting the prince to kiss her) and jumn right.
- You will land on an island, have a chat with Glenda.
- Walk as far right as possible and drop the power pill.
- Jump right, right and right again (avoid the birds).
- Put Dizzy on the second step and drop the bucket. You automatically pick up the bucket of hot
- gevser water.
- Exit left and pick up the Drink Me potion. Go right and right again.
- Drop the bucket and the Drink Me potion.

Just when everything seemed to be going so well, Dizzy was crowned 'Prince Omelette'.

- Go right and right again. Go up the stairs then right into the tower
- with a view.
- Jump right at the pillow. Jump right three times and walk to the right of
- the well roof. Watch out for coconuts the cheeky
- monkeys throw.
- Jump right twice and collect the big stick. Walk to the diamond on this screen and iump left.
- Walk to the edge of the platform and iump right.
- Go up the platform to the edge and jump right. Collect the black cat, walk to the far right an
- You should have landed on Weirdhenge,
- collect the diamond. Collect the dagger.
- Walk to the far left and jump left.
- Mind the torch on the screen to the left of Weirdhenge
- Go left until vou see Dylan again. • Drop the dagger, collect the leaf, drop the
- dagger again. Collect the leaf and exit right.
- Go right until you see Glenda on the island. Drop the black cat on Glenda and she will help

DEPART OF 1888

And there, in the bushy grove, stood an irritating small egg with arms and legs.

you with Dylan.

- Drop the leaf and she will put it in the cauldron.
- Go left and keep going to where you dropped the dagger.
- Pick up the dagger then exit left, collect the cloth duster.
- Exit left, go on the shark fin till you get to the other side
- Go left until you get to sleeping Dozy and drop the cloth duster • Exit left and drop the dagger on the goat.
- Drop the big stick to hit the goat (no, really).
- Drop the big stick again. Go all the way back to the moving bridge.
- Collect the bucket and Drink Me potion. Go right and right again, then up the stairs. Make your way to the gold cross and pick
- Go left and position Dizzy on the first or second step which lead to the top right exit.
- Jump and walk left to the edge of the window ledge. • Take a big jump to the left.
- Keep walking until you meet Denzil the ice block.
- Find out what happened then drop the bucket. Exit left, keep going until you meet Vampira.
- If you have the gold cross, no problems. Exit bottom right and walk left off the stairs.
- Walk right into the burning torch and collect it. Once collected, the secret door will
- have opened.
- Walk left then right to the opening. Jump into the exit and find poor Daisy.
- Chat with her and then drop the Drink Me potion. • It will reduce her to normal size.
- Go to where you cured Denzil and collect his

the hed.

personal stereo. Drop the gold cross. Go right, and keep going to the screen before

Make sure you still have the gold cross.

- the shark. Go up the stairs and into the room with
- Go to the pillow jump right, then left to the top of the hed
- Walk to the far left and then jump left. Walk left until it is possible to go up the stairs.
- Collect the lightning rod and exit bottom right. Keep walking left to the window ledge.

• Go up the stairs and exit top right.

- Jump in the trees as you did before. Walk left, and jump left when you enter the
- screen below.

If only there were something really heavy in the bucket, he'd be smashed on the well.

- Walk left to the first platform up and jump right.
- Walk to the edge of this platform and iump right.
- You should be next to the bard.

- He will ignore you.
- Drop the personal stereo and collect the magic nines
- Go right to the well.
- Drop the torch.
- Go down the well and place Dizzy onthe diamond
- Collect the diamond and drop the magic pipes.
- The pipes will make the rat fall asleep.
- Wait for the rat to fall down the well then jump left.
- Go through the forgotten cave, jump left over the water
- Exit left collect the ancient lamp but mind the dripping slime.
- Keep jumping until you reach the castle again.
- Make your way to sleeping Dozy.
- Drop the ancient lamp on him.
- Collect the cloth duster.

- Make sure you have the lightning rod.
- Drop the cloth duster, twice on the lamp and Dozy is cured
- Collect the poisoned apple.
- Drop the lightning rod, exit right and drop the cloth duster.
- Make your way back to the well.
- Collect the burning torch.
- Go to Glenda on the island.
- Collect the diamond.
- Give Glenda the poisoned apple to put in the cauldron
- Give Glenda the torch to light the fire.
- She will cast a spell and create the weed-killer potion.
- Just Grand Dizzv left.
- Go to the well and fall down it.
- When you enter the cave collect the red sticky something.

Fantasy World Dizzy

- Give the apple to the troll.
- Take the jug of water and throw it on the fire.
- Take the loaf and go left.
- Get the boulder and exit top right.
- Drop the loaf as near to the rat as possible.
- Follow the rat and exit top right.
- Drop the boulder at the bottom of the stairs.
- Walk up the stairs and stand on the second stair down.
- Jump left, walk left then pull the lever.
- and get the rope.
- Go to the entrance hall and drop the rope.
- Go to the banquet hall and jump on the table.
- Walk to the far left then jump further left.
- Jump right twice in to the castle staircase. Walk up both sets of stairs and jump left at
- the top into the attic
- Come back down the stairs and go right.
- Stop as soon as you enter the room, then jump right.
- Get the key and go to the entrance hall.
- Drop the bone, get the rope, and go right to the alligator.
- walk as far as you feel safe and wait.
- The alligator snaps three times then stops.
- On closing of the second snap jump right. Drop the rope and Dizzy does the rest.
- Jump right and get the boulder.
- Go right, stop by the tree and drop the key.
- Go back to the entrance hall and get the bone.
- Go left across the moat and portcullis.
- Go left until you fall down then go right at
- Get the boulder and drop the bone.
- Walk left and then jump right above the den and wait.
- The rhino will walk into his den and stay there
- Jump from where you are and keep going to the guard house.
- Stop at the tree stump.
- When crossing the screen wait until the hawk is behind you.

- Jump up the boulders and stop at the broken bridge
- Drop the two boulders, get the third and do the same
- When the third boulder has been dropped walk left.
- Jump from the piece of wood and jump left to get the key.
- Walk left and keep going until you come to
- Jump right into the banquet hall talk to Denzil
 There is a hole in the pier so jump over it.
 - Go left and talk to Dozy to get the sleeping potion.
 - Make your way back to the wide eved dragon.
 - Drop the potion near the dragons head and wait for it to fall. • Get the key, go left to the well and get the
 - red bag
 - Jump right twice and keep walking right.
 - When you see the little cow pick it up and walk right
 - Go to the base of the volcano and pick up
 - With the three keys walk left until you reach the lift hut
 - Try all the keys on the motors and exit the way you came in.
 - Go to the allotment and jump onto the platform in the tree.
 - Go to the edge and jump left.
 - Walk left and jump left, followed by a right and left jump.
 - You should have rolled into the Dozy hut and go to the lift.
 - Get off at the top and walk right to leave the screen.
 - Walk right and stop at the torch then jump straight up.
 - Walk right and get the door knocker.
 - Go back to the lift, find and talk to the Grand Dizzy, get the crowbar.
 - Go left and get the pickaxe then go to
 - Drop the crowbar and wait for Dizzy to do his
 No, really.

- stuff, then fall in.
- Checklist door knocker, pygmy cow and pickaxe.
- Go left and wait for the shop keeper, when he appears give him the cow.
- Get the bean and go left, jumping the well.
- Jump onto the platform and go right to the chanel.
- Jump right onto the first wall.
- jump right again then fall left.
- then jump right again and get the key.
- To get onto the wall jump left, jump right and jump left again.
- Fall up!
- Go to the castle staircase and move to the door
- Drop the door knocker and enter to get the bucket
- Go to the base of the volcano and drop the bucket in the water Get the bucket and go to the allotment, drop
- the bean and the bucket into the manure.
- Make your way up the beanstalk to the first cloud.
- Jump right twice, jump left then right a further five times.
- Jump over the gap in the clouds and get Make your way to the lift control hut and use
- the last key • Fall down the hole and go down on the lift,
- then drop the egg. Wait for the dragons head to fall then
- Go to the middle of the next room.
- Jump left, right and drop the pickaxe.
- Go left and get the carpet.
- Go right until you meet the Troll.
- Go to the cloud castle. Be careful of the spikes and drop the carpet.
- Jump right, jump left, then walk left to the first little brick.
- Jump right and stand by the lever, down comes Daisy.
- Go and get her.
- Then go and get the coins.
- That's it.

Ah, a rat. Do rats eat eggs, do you think? If it would just eat one egg in particular...

- Make your way back to Excalibur.
- Drop the sticky something on it.
- You will not be able to let go of Excalibur.
- Go back to the Ice Palace entrance.
- Exit left, go down the steps and jump left.
- Jump right walk right and jump left. Jump to the hole in the wall and go to the far left of it
- Take a big jump to the left.
- Collect the diamond and walk left.
- Walk right and enter the mirror in the wall.
- The controls are now reversed.
- Walk into the Oueen of Hearts and exit left.
- Make your way across to Grand Dizzy. When you fall on him all the characters
- are cured. Go to the volcano base where you filled the bucket.
- Go to the last step and jump right.
- Step on the large rock and walk right.
- You will see clouds coming from the hot lava. When a cloud comes from the middle do
- the following: Jump right onto the cloud, walk right for a split second then jump right again.
- Exit right, exit bottom right go down the tunnel.
- Watch out for the fire which moves across the screen. Walk to Hades, before you get to his fir barrier
- he will talk and give you the Wizardkiller Trident. Collect the trident and take it back to Zak's in
- the Ice Palace Make sure your energy bar is full when you enter Zak's room.
- Drop the trident.
- Collect Zak's ring and make your way back to Hades collecting all the diamonds left.

There are 30 diamonds in all, 27 in view and three hidden.

- Behind the railing (screen where Dylan was).
- Behind the railing (screen where Excalibur was).
- Behind the railing (screen to the left of Hades).
- Go to where you collected the Wizardkiller Potion and exit left.
- Walk left to the edge of the rock and jump left.
- Drop Zak's ring and make your way back • He will cast a spell for you if you have all 30
- diamonds to take you home. And that's your lot for this one.
- Are you still reading this?

- **DIZZY PRINCE OF THE VOLK FOLK**
- Take the jug of water, matches, pile of leaves.
- Drop the leaves by the door, use the matches. and then the water to quench the flames.
- Talk to the bugle boy who will give you a magic carpet.
- Go left and pick up the heavy pickaxe.
- Go right, jump onto the platform, go
- Pick up the small cage and talk to the lion.
- Go to the bottom of the hillside and drop the nickaxe
- Go left then up and get the gold nugget.
- Go back to the hillside and drop the pickaxe.
- Go right to the bank of the river Styx. • Catch the boat (be careful to move with it).
- Make sure that you have the gold nugget. Talk to the ferryman.
- Go right to the enchanted forest and drop the small cage by the Pogie.
- Go back to the top of the hill. Jump from the right of the screen and you'll land on the cloud. Get the Acme bridge kit.

Go up to the tree house in the enchanted

- treetops. Jump onto the little platform near the right of the screen.
- Drop the bridge kit. Moving up jump from the rightmost platform. You should land on a cloud.
- Jump onto the next cloud and off the screen (but not from the edge of the cloud - you'll land in the nettles).
- Pick up the golden harp. Go right and jump the river.
- Go up to the uppermost branches, then left. Jump over the awfully high clouds.
- Talk to St. Peter. • Drop the golden harp, he will give you some
- holy cheese. • Go back to Pogie. Drop the cheese in the cage.
- Take the caged fluffle to the castles rear
- Drop Pogie by Rockwart and enter the castle. Go up the stairs and left then up the next set
- of stairs Go to the castle ramparts and pick up the
- rusty old key. On the other side of the stairs and landing pick up the outboard motor.
- Go back across the river Stvx.
- you a scythe. Return to the tower drawbridge and use the

Give the motor to the ferryman. He will give

We hate this stupid egg and can't think of...

- scythe to clear the nettles.
- Go up to the Double Trouble screen. DO NOT pick up the spanner.
- Go through the inner sanctum into the deserted tower.
- Use the key to unlock Daisy's chamber.
- Don't bother kissing her it doesn't work.
- Go back down, then past the bat and pick up
- the tweezers. Go to the top of the hill.
- Use the tweezers on the lion. Take the sharp thorn to the double trouble screen.
- Drop the thorn when you enter the screen.
- Go round to the top level. When the evil Dizzy walks over the thorn it will die.
- Get the spanner.
- Pick up the brass bugle.
- Give the brass bugle to the bugle boy, he will give you a jolly joke book.
- Go to the castle drawbridge, drop the spanner on the jammed mechanism.
- Enter the gardens and talk to the princess.
- Give her the jolly joke book and she will give you the regal flag.
- Take this to the castle ramparts and hang it on the flagpole. The Bugle boy comes to see if the king is back
- vet. Talk to him. He calls the king, who will make you prince of
- Go to Daisy and wake her up with a kiss. All you need to do is collect the cherries to
- complete the game. They are: Above the dungeon in Trapped.

the Yolkfolk

- By the torch in A Few Trees. Behind the small cage in Top of the Hill.
- Near the gold nugget in Top of the Hill. By the rocks in Hillside
- Under the railing in the Enchanted Forest. Under Pogie the fluffle in the
- Enchanted Forest.
- Under a railing in Enchanted Treetops. By some stone blocks in Edge of the Tower.
- On the cloud in Fluffy Cloud. On the rampart in Castle Rampart.
- On the stairs in Castle Rampart. In the bushes in Tower Drawbridge.
- Beneath the roof tile in First Landing.
- Behind strange mechanism in Inner Sanctum. By the wall in the Deserted Tower. Behind the greasy spanner in Double Trouble.
- Under a clump of grass in Castle Drawbridge. Under a clump of grass in the Castle Gardens.
- Under a stone block in the Castle Gardens. That's it till next month, then.

Except that some of the games are fun. May 1993 AMSTRAD ACTION

Reage On

Don't just sit there. Commit your thoughts to paper and send them to us. This lot did and look what happened...

Free comms

If you have a serial interface you can do without a 'proper' comms package to transfer files from the Amstrad Notepad.

On the Notepad, open a file called CONTROL-Z. Hold down SYMBOL and SECRET/MENU and select the right arrow (six characters from the right on the top row).

Set the transmission speed to 1200 with FUNCTION-S and SECRET/MENU on the Notepad. Use SETSIO 1200 on the 6128.

PIP filename=AUX:

on the 6128 and then send the file from the Notepad. When the Notepad shows the file has been sent, press STOP and send CONTROL-Z. The 6128 will now burst into life and save the file to disc.

In case it isn't obvious (It isn't to me. - Ed) the right arrow special character replaces CONTROL-Z on some printers, hence its use on the Notepad. But CP/M uses it as its 'end of file marker and will not 'close' the file until it has

John R Hudson Huddersfield

Dead Multiface Sketch

I've had a Multiface 2 for about a year and a half and now, when I put it in the back of my CPC464 and turn it on the screen stays blank. I've tried turning it on and off a few times but I just get fuzzy lines on the screen.

Is there any way you can help me, please vou've got so many Multiface cheats. It'd really cheese my friend off because he said I'd never get it working.

A Reader Somewhere

Ah yes, er sorry about this, but your friend's going to remain in his un-cheesed-off state because he's right. Your Multiface is, sadly, deceased and your only option is to replace it. Bummer, eh? TN

Teenage Mutant Who?

About six months ago I bought Teenage Mutant Hero Turtles - The Coin-Op which I enjoyed playing immensely. Then a couple of months ago I lost the code sheet necessary to play the game. I was devastated.

I wrote to Mirror Image, but they've gone into liquidation. Can you help me get the code sheet, please?

Fric Walker Guildford

Can anyone help Eric with a photocopy of the codes? He really does own the game (he sent it to us to prove it).

Oh, and we have no special magical influence over computer tapes. If your games don't work we can't fix them, so don't send them to us. We've had a couple recently with notes on saying 'please mend this for me'. Sorry, but we can't. If we get any more we'll throw them away. TN

Damn those busters

I am the proud owner of an Amstrad 6128+ and a short time ago I bought a flight simulator called ACE. I put the game in and typed CAT and a list of all the files appeared, including one called ->

Miserable old...

I have been an AA fan since issue 9, but recently you seem to have lost the old magic. 1. The new logo is crap (how long did that take to knock up?) and a pale imitation of the old (with triangle).

2. Cut down on the wibble and back-slapping (eg Power Up, Help Yourself, Future Shocks). If you really want to save the CPC, give us more Techy Forum (only 3 pages?) and Public Image to encourage and help new programmers.

3. Simon Forrester's reviews are diabolical. They say nothing about the game and are just extended ego trips trying to make himself

4. Get yourself a spelling checker. You spell word processors with a 'c'.

F A Stewart York

Why can't everything stay the same? Why does there have to be change? Etc..

1. The new logo is pretty much the same as the old one, only it's horizontal. There are always

problems with new logos so we tried to keep it as close to something whingers like you would recognize. The original logo was designed as a 'modern' thing in 1985 and was considered a little old fashioned (so old fashioned, in fact, that the triangle disappeared in November 1990). I'm sofry you're unhappy with it - lots of other people like it which only

2. We're taking the mag in a new, more techie, direction as it is. But we have to maintain a balance and plenty of readers complain bitterly about all the 'techie wibble' and would dearly love to see more games, cheats, POKEs and amusing stories about the team. If you don't like what we write, tell us exactly what you want to know and we'll write about it. 'Make it all Techie Forum' isn't good enough, frankly, and would, in fact, make for a very dull mag.

3. You're entitled to your opinion, of course. But we maintain that a review which regurgitates the instructions and then says 'it was good', is rubbish too. We all do our best to

'Git aht of it. We used to read this magazine when it was all fields. Yeah.'

be entertaining as well as informative. Sometimes it works and sometimes it doesn't. And then again we get letters from people who enjoy Simon's style – you're not our only reader and yours is not the only opinion that counts. 4. Oh dear. In fact we have several spell checkers, but I didn't use any of them on the contents page. Sorry. But hey, don't be so smug. If you manage to live your own grumpy life without making any mistakes give us a call and give us a hard time, but no one's perfect, y'know. Lighten up. TN

Multiface. Buy now!

ACTION!

Once in action, it freezes everything and it

displays its own menu. Being fully menu-driven

and error-trapped, you'll probably never need the full manual that comes with the MULTIFACE

Most operations are also entirely AUTOMATIC,

so to SAVE a game once you stopped it, you

ust name it, insert disk/tape, and press a key.

You can then *return* and *continue* the program.

If you get beaten later on, just reload from where

you saved last and play just from there again!

No need to go back to the start all the time. Or

even better, the Multiface allows you to POKE

When the MULTIFACE was launched in 1986. it was an outright winner. No one has ever come up with such a powerful, useful add-on, Labeled the ESSENTIAL CPC COMPANION, this MULTIpurpose interFACE proved to be an absolute Godsend for the Amstrad CPC users. Remember the first disk drive on the CPC 464? Suddenly the loading took seconds rather than minutes from tapes. Except that there was not much to load - very little had originally been released on disks and there was no facility to transfer programs from tapes to disks.

THE SAVIOUR

This is one area where the MULTIFACE saved everything - literally. The black magic box could stop anything any time and SAVE it to disk or tape. When the 6128 came with a built-in drive, it was left again to the MULTIFACE to do all the transferring - and to perform other miracles... So, in case you just came from Mars, what does a MULTIFACE do? First, it sits at the back of your CPC, its magic button always ready.

Press it, and the MULTIFACE takes control!

INFINITE LIVES listed in this magazine and you'll never loose. The MULTIFACE comes with a built-in TOOLKIT that lets you inspect/alter/dump the CPC RAM. t also has its own 8K RAM and 8K ROM. Many top programs were written with the aid of the TOOLKIT and the extra 8K RAM. And do

When we announced earlier that we were to pull out of the 8-bit market, the surge of interest in the MULTIFACE was such, that we had to make many more. And not just the MULTIFACE - we also have the one and only disassembler.

THE INSIDER

that lets you see and alter what happens any time anywhere inside a RUNNING CPC program. This is a unique de-bugging/development aid. It comes on a disk and loads inside a MULTIFACE. Press the magic button and the INSIDER will disassemble, find text/code, dump the CPC RAM to printer, etc. Get it at HALF-PRICE for £7.95! As this goes to press, we still have plenty of stock of both the MULTIFACE and INSIDER. However we can't go on manufacturing for ever. The MULTIFACE is terrific value, in fact more for the customer than for the manufacturer... So

HURRY!

In any case we will only accept orders when we can supply the goods and we give a full guarantee. Plus we still offer up to £15 OFF! mail orders!

you like the screen shots in this magazine?

They are all produced using the MULTIFACE!

Tasword

Why won't *Tasword* run on my 464? **Everyone Everywhere**

I'm sorry about the mix-up with the covertape. It seems that due to differences in the workings of the various machines, CPC464 owners may have a problem running Tasword.

So if, when you run Tasword, you get the

Syntax error in line 17793 Line does not exist in 17793 then we can help.

First, you'll need to insert the Tasword cassette, and type RUN". You will be prompted

TITLE.BIN. I loaded it and the title screen for *Dam Busters* by US Gold appeared. Then the screen cleared and went back to BASIC. Please can you tell me why this appeared and if there is any chance of the complete game being on the disc.

I buy AA every month, so let me congratulate you on it. You have just the right mix of serious programs and games.

lain Leslie Duns, Scotland

As far as we can make out, it's probably just laziness somewhere along the line that meant that the Dam Busters title screen was still there when they came to duplicate ACE. There is, in short, no chance at all of the whole game being there. Sorry, TN

Take off prevented

I have a game called *Antiraid*. I have no problem finding the Anti suit, but when I try to take off, it says 'gravity prevents take off'. Could

to press PLAY then any key, and the program will run, and go wrong.

The problem lies in line 130 of the program, so type EDII 130. You should have the following line:
130 REM ondisc=(1=1):ON ERROR GOTO 140:
1DISC:GOTO 150

You now have to delete the following bit: :IDISC:GOTO 150

and type RUN. Hey presto, it'll all work fine.

One easy way to sort out the program for good is to save this new version back onto your covertape cassette. Rewind your tape, take it out of the machine and wind it to the end of the leader tape (so the brown bit appears). Put it back in the machine and type: SPEED WRITE 1:SAUE "TASWORD.BAS"

Then simply follow the on-screen prompts. TN

you please help me?

Kenny Thompson Carlisle

Yes. What you need are the jet boots which are one up and four to the left of the suit (if not there, keep going left, they're not far away). **SF**

Bring the type-ins back!

I'd like to ask if you could provide subscribers with a cover disc option as it's annoying to send away for a disc and wait weeks to get it.

I should also be grateful if you were to let me know if there's a way to get a screen shot without using a Multiface.

John Daniels Gourock

We've considered all manner of options with discs and such but the present system is the only really viable one. Sorry.

There are all manner of ways of getting

screen shots. We use the Multiface (to which you object) or a rather snazzy video processor connected to a Mac (which costs a fortune).

In days of yore, we used to photograph the screen with an ordinary camera. You need to mess about with it a bit to get the shutter speed right and we also found that some sort of system for keeping out stray light from the room was helpful. We joined two cardboard boxes together to make a tunnel, put the monitor in one end and cut a camera-sized hole in the other to shoot the screen.

There's also a method, if your program is in BASIC, for saving the screen display. Simply insert, in some major loop in your program, the following line:

IF INKEY\$ = "N" THEN SAVE "filename.scr",B, &C000,&4000

And that should do the trick. TN

Mario? Surely not.

I was looking through some early issues of AA and I noticed an advert in issue 29 for a game called *Mario Brothers*, by Ocean. Is this game the forerunner of the game available on current games machines?

If this is so then is it still possible to get this game as I have told my son and daughter that nearly all games are eventually available in Amstrad format. If I could buy a copy it would strengthen my case for not buying games machines, as I'm a firm believer that our two Amstrads offer more than a games machine any day.

Graham Toseland Northampton

Well, it did appear, but it wasn't quite what you might imagine. It was a simplistic platform game and not really the sort of thing that would impress anyone who hankers after a games console. Mario™ and everything™ connected™

CLASSIC COLLECTION

I am totally unhappy with the so-called 'Classic Collection'. Not only has it abolished the typeins and POKEs but it also gives me software I don't want.

You also say you're going to put an assembler on the tape. I don't want an assembler either. Who wants to learn all that machine code gobbledygook? I don't, that's who. Please, please, please don't abolish the type-ins and POKEs. Also, I'd like about two games a month with the odd utility or so. Come on, you gave a word processor away on covertape number 13 and an assembler on covertape number 5. Why do us readers want another one? Tell me.

S McNaughton Edmonton

More covertape moans

Why did you change the covertape? Why don't you put the POKEs and Type-ins back? Why do things have to change? Why can't everything just stay the same? Why, why, why?

Some more people Some other places

We've had a load of letters about the new-look covertape from people who like it, too, but...

We decided to drop the type-ins from the tape because we couldn't guarantee they'd be there every month. We decided we'd get more complaints if they appeared randomly than if they never appeared at all. Then, of course, they are called 'type-ins' and should, by their very nature, be typed-in.

As for S's other points: Covertape 13 was published what we in the real world call 'a very long time ago', and number 5 was (not surprisingly) before that. We know that some readers will have these programs but we also know that a lot of readers don't. That's the

point of giving away another (different) one.

There are also lots of people who want to learn all that 'machine code gobbledygook'. Apparently (and I know this will be hard for you to believe, Mr McNaughton) there are people who use computers for things other than playing games. It's radical, I know, but we just can't stop them.

No one, it seems, wants to type in the typeins or to play games without having some sort of cheat. No one, that is, except all the people who used to complain about our putting type-ins and POKEs on the covertape and wasting valuable space.

The bottom line, to paraphrase Abe Lincoln (really badly), is that you can't please anyone, ever. Now don't get me wrong, it's not that I don't care what you want, it's just that you all want different things. So give it a try for a little while, you'll probably grow to love it. After all, the people that hated the POKEs and Type-ins had to put up with them. **TN**

with him[™], his brother[™] and his friends[™], are all now trademarks of Nintendo[™] and there is now no chance whatever[™] of their appearing[™] on any other format[™]. **TN**[™]

Tuner sandwich

Could you please tell me if there is an adaptor that will let me use a Super Nintendo with an Amstrad monitor. If there isn't an adaptor, could I get a TV tuner and plug that into my monitor so that I could plug the SNES into the tuner?

Orlando Harrison

Grange-over-Sands

We can't think of a reason why you couldn't run your SNES through your monitor. Sadly, though, we're not entirely certain how to connect the two. Perhaps someone who knows...

And if you could find a suitable TV tuner, that would do the job as well. TN

You can't get the wood

I have just got a DDI-1 + Multiface II and a 3.5inch disc drive. I've been told that I can't get games on 3.5inch disc for an Amstrad 464+. Can you help?

D Tarr Edmonton

Not as such. The advice you received was pretty much correct – you can't get games on 3.5inch disc. What you could do, though, (if only it weren't illegal to copy commercial software) is save your tape games to disc using your Multiface. You could freeze the game when it gets to the title screen and save the frozen game to disc. That is, you could if it weren't illegal. TN

Spent cartridges

Thanks for the round-up of budget games, it was a great help.

I bought a GX4000 for Christmas for my children and I'm having trouble deciding what games to buy. I already have *Pang* and *Switchblade*. Could you help by printing a definitive guide to cartridge games?

And maybe Gremlin could put Nigel Mansell's Grand Prix on cartridge.

Michael Leighton Newport, Gwent

Well, Pang's about the best there is, but why not try Navy Seals (an excellent platform shootything), Pinball Magic (a pinball thing), or get a Trojan Light Phaser and try Skeet Shoot or Enforcer (they're not brilliant, but they're a laugh for a little while)?

And, yes, why don't Gremlin do just that? And maybe some of the other softies could put some of their games on cart too. **TN**

POKEr face

After five years of having my 464 I've got a huge stack of games and I've just started reading AA (Better late than never, I suppose. – Ed) Then I saw your pages of POKES and I got enthusiastic and read the instructions. It said I would need an interface. A what? Can you tell me what it is, what it does, how much it costs and

where I get one. Thanks.

M Camm Spalding

What it actually said is that you need a Multiface. It's a black box which plugs into your CPC. It allows you to break into programs and change bits of them. They cost 35 quid and you get them from Romantic Robot on 081-200 8870. TN

Fair dinkum and all that

I have been buying your magazine for about a year – I think it contains a lot of beaut information (Gosh, thanks. – Ed) and my girls spend many happy hours playing the covertage games.

The thing that peeves me is that because I live in a CPC Twilight Zone (Doo do do do. – Ed) 3inch discs and games are non-existent. I look with envy at the vast array of gear you can get in the UK. It's a case of getting a visitor to your land to get some, or dream of what might have been. I could easily get a PC but it seems such a waste, especially when the Amstrad takes care of my humble needs.

I wonder if you could do a feature on the addons you recommend for the machine.

A Cusick Somewhere in Oz

It's nice to know that we've got something over here that other people envy besides ancient architecture and amusing comedy weather. Have you tried contacting any of the advertisers to find out if they'd send stuff overseas? I'll bet loads of them would be amenable. And an add-on feature isn't a bad idea. Keep your eyes open. TN

Another satisfied customer

I had to write to tell you about those nice people at Avatar.

A friend's grandson has a Spanish version of the 6128. The lad thinks I'm the cat's whiskers because I've 'mended' his electronic things in the past. Well, he wanted me to convert his machine to speak English and the only difference in the two machines (apart from the keyboard) appears to be the ROM (Spanish – 40015, English 40025).

I wrote to Avatar about using their advertised 6128 upgrade ROM and three days later (a Saturday), Phil Craven rang me to confirm that this ROM would do the trick. He also told me the best way of going about it.

I see from AA90 that Phil is doing a series of features about upgrades so perhaps this letter may be of interest to other readers who have a Spanish version of the 6128 and to let them know how Avatar have 'behaved above and beyond the call of duty'. (That last remark lets you know that I'm a wrinkly old sweat who knows you should always keep your feet and knees together – no, that's not rude – you work out what mob I was in!)

Thanks for a great mag – I've just renewed my subscription.

Stan Carter Portsmouth

Getting Into Print

If you're a subscriber, you'll have read, last month, a whole heap of helpful advice on getting your letters published in AA (subscribers get a newsletter – another good reason for subscribing).

Some extra special advice, though, is that in future we'll only print letters from people who give us their name and full address. These are perilous times, you see, and we can't be too careful. We'll only print your post town, as always, but if your full address ain't there, we won't print any of it.

Extensive research by our resident military historian reveals that you were either in REME or the Poona Rifles. No, just kidding, we've worked it out really. Geronimo. **TN**

Art and all that

I've recently got hold of a Citizen 120D+ printer. As soon as I got it, I started looking for a decent art package, but failed. Could you please help me by suggesting a suitable package (preferably one that animates).

Matthew Harding lpswich

Art packages? Well, how about OCP Art Studio (loads of people sell it)? And it animates, too.

More slipped disc

Like A Ward of Kent (Reaction AA91) I too used to have hassles trying to get the covertape onto disc – some progs would transfer, some wouldn't. After much fiddling and adjusting of heads and levels I threw the cassette machine away.

Most cassette machines these days are stereo and my solution was to buy a mono cassette deck for about £20. Since then all covertapes have transferred first time and I've had no problems at all.

John Driver Swindon

Well there you go, then. TN

Write in, right now Send your letters to:

Coming to a newsagent near you!

For believers...

We'd like to try a little experiment in the power of the human mind. All you have to do is say to yourself 'they will release it, they will release it' over and over again until either a) you achieve nirvana, or b) Street Fighter II is finally released and we actually get to review it for you.

For Businesses...

Can't afford a PC? (Or don't want one?) Want to run a business? AA spoke to people who've set up and run businesses with their CPCs and found out just how easy it is. With a complete guide to the hardware and software required, this could be all you need to make your millions.

For Psyschopaths...

We're going to have full-on raging reviews of those mellow, relaxed and friendly games -Super Cauldron and WWF Wrestling.

And if all goes well, there'll be loads more as well (maybe).

For the cheap...

The usual round-up of public domain software by our resident expert.

For the lucky...

What issue of AA would be complete without our Classic Collection.

For the troubled... Another instalment of Technical Forum.
